MORROW ANASTASIA

THE SECURITY DILEMMAS OF

SOUTHEAST ASIA

Rhythmo Productions

"Violent Geographies is essential to understanding how the politics of fear, terror, and violence in being largely hidden geographically can only be exposed in like manner. The 'War on Terror' finally receives the coolly critical analysis its ritual invocation has long required." —John Agnew, Professor of

Geography, UCLA "Urgent, passionate and deeply humane, Violent Geographies is uncomfortable but utterly compelling reading. An essential guide to a world splintered and wounded by fear and aggression—this is geography at its most politically engaged, historically sensitive, and intellectually brave." —Ben Highmore, University of Sussex "This is what a 'public geography' should be all about: acute analysis of momentous issues of our time

in an accessible language. Gregory and Pred have assembled a peerless group of critical geographers whose essays alter conventional understandings of terror, violence, and fear. No mere gazetteer, *Violent Geographies* shows how place, space and landscape are central components of the real and imagined practices that constitute organised violence past and present. If you thought terror, violence, and fear were the professional preserve of security analysts and foreign affairs experts this book will force you to think again." —Noel Castree, School of Environment and Development, Manchester University "A studied, passionate and moving examination of the way in which the violent logics of the 'War on Terror' have so quickly shuttered and reorganized the spaces of this planet on its different scales. From the book emerges a critical new cartography that clearly charts an archipelago of a large multiplicity of 'wild' and 'tamed' places as well as 'black holes' within and between which we all struggle to live." —Eyal Weizman, Director, Goldsmiths College Centre for Research Architecture *Protection and Empire* Oxford University

Press

This book examines the rapid spread of uniformed police forces throughout late nineteenth-century urban America. It suggests that, initially, the new kind of police in industrial cities served primarily as agents of class control, dispensing and administering welfare services as an unintended consequence of their uniformed presence on the streets. Hunter-Gatherer Archaeology as Historical Process University of Arizona Press Anthropologists have long looked to forager-cultivator cultures for insights into human lifeways. But they have often not been attentive enough to locals' horizons of concern and to the enormous disparity in population size between these groups and other societies. *Us, Relatives* explores how scalar blindness skews our understanding of these cultures and the debates they inspire. Drawing on her long-term research with a community of South Asian foragers, Nurit Bird-David provides a scale-sensitive ethnography of these people as she encountered them in the late 1970s and reflects on the intellectual journey that led her to new understandings of their lifeways and

horizons. She elaborates on indigenous modes of "being many" that have been eclipsed by scale-blind anthropology, which generally uses its large-scale conceptual language of persons, relations, and ethnic groups for even tiny communities. Through the idea of pluripresence, Bird-David reveals a mode of plural life that encompasses a diversity of humans and nonhumans through notions of kinship and shared life. She argues that this mode of belonging subverts the modern ontological touchstone of "imagined communities," rooted not in sameness among dispersed strangers but in intimacy among relatives of infinite diversity.

SOCIAL CHANGE AND APPLIED ANTHROPOLOGY

University of Michigan Press

This gripping portrait of environmental politics chronicles the devastating

destruction of the Philippine countryside and reveals how ordinary men and women are fighting back. Traveling through a land of lush rainforests, the authors have recorded the experiences of the people whose livelihoods are disappearing along with their country's natural resources. The result is an inspiring, informative account of how peasants, fishers, and other laborers have united to halt the plunder and to improve their lives. These people do not debate global warming—they know that their very lives depend on the land and oceans, so they block logging trucks, protest open-pit mining, and replant trees. In a country where nearly two-thirds of the children are impoverished, the reclaiming of natural resources is offering young people hope for a future. *Plundering Paradise* is essential reading for anyone interested in development, the global environment, and political life in the Third World.

SMALL-SCALE IRRIGATION SYSTEMS

University of Arizona Press

This contemporary introduction to the principles and research base of cultural ecology is the ideal textbook for advanced

undergraduate and beginning graduate courses that deal with the intersection of humans and the environment in traditional societies. After introducing the basic principles of cultural anthropology, environmental studies, and human biological adaptations to the environment, the book provides a thorough discussion of the history of, and theoretical basis behind, cultural ecology. The bulk of the book outlines the broad economic strategies used by traditional cultures: hunting/gathering, horticulture, pastoralism, and agriculture. Fully explicated with cases, illustrations, and charts on topics as diverse as salmon ceremonies among Northwest Indians, contemporary Maya agriculture, and the sacred groves in southern China, this book gives a global view of these strategies. An important emphasis in this text is on the nature of contemporary ecological issues, how peoples worldwide adapt to them, and what the Western world can learn from their experiences. A perfect text for courses in anthropology, environmental studies, and sociology.

A GENERATION LATER

IUCN

People have always been attracted to foods rich in calories, fat, and protein; yet the biblical admonition that meat be eaten "with bitter herbs" suggests that unpalatable plants play an important role in our diet. So-called primitive peoples show a surprisingly sophisticated understanding of how their bodies interact with plant chemicals, which may allow us to rediscover the origins of diet by retracing the paths of biology and culture. The domestication of the potato serves as the focus of Timothy Johns's interdisciplinary study, which forges a bold synthesis of ethnobotany and chemical ecology. The Aymara of highland Bolivia have long used varieties of potato containing potentially toxic levels of glycoalkaloids, and Johns proposes that such plants can be eaten without harm owing to human genetic modification and cultural manipulation. Drawing on additional fieldwork in Africa, he considers the evolution of the human use of plants, the ways in which humans obtain foods from among the myriad poisonous and

unpalatable plants in the environment, and the consequences of this history for understanding the basis of the human diet. A natural corollary to his investigation is the origin of medicine, since the properties of plants that make them unpalatable and toxic are the same properties that make them useful pharmacologically. As our species has adapted to the use of plants, plants have become an essential part of our internal ecology. Recovering the ancient wisdom regarding our interaction with the environment preserves a fundamental part of our human heritage.

**MIGRANTS TO THE COASTS:
LIVELIHOOD, RESOURCE
MANAGEMENT, AND GLOBAL CHANGE
IN THE PHILIPPINES**

University of Michigan Press
The Feder Guide lists street parking regulations for every street in the downtown area of Manhattan (30th Street - Battery Park) as well as over 150 parking facilities in this same area including their locations, hours of operation, contact information and rates. This book also

provides street maps, gives helpful hints as to the best and worst places for street parking and offers tips for what to do if a car is missing, towed or ticketed. If this book helps a Manhattan motorist avoid just one parking ticket, it'll pay for itself up to six times over. If it helps a driver in Manhattan to avoid being towed, it pays for itself at least fourteen times over. *The Pharmacologic, Ecologic and Social Implications of Using Noncultigens* Cambridge University Press

This book records the emergence and institutionalization of social inequality in San Jose, a pioneer farming village located on Palawan Island in the Philippines. Early chapters reconstruct the historical circumstances surrounding San Jose's settlement and growth under conditions of relative equality of opportunity. The community's development is examined in detail through the experiences of eight migrant farmers, all self-made men some conspicuous successes, others conspicuous failures. Comparing and evaluating the causes of pioneers' successes and failures, Professor Eder stresses that the origins of inequality in San Jose depended less upon the

individuals' time of arrival or amounts of starting capital or other such factors than it did upon personal differences. Social inequality, for the most part, had its basis in a level of motivation and in a kind of 'on-the-job competence' that some men and women brought to the frontier and others did not.

The Economics and Politics of Floodplain Farming in Amazonia Univ of California Press

The remains of hunter-gatherer groups are the most commonly discovered archaeological resources in the world, and their study constitutes much of the archaeological research done in North America. In spite of paradigm-shifting discoveries elsewhere in the world that may indicate that hunter-gatherer societies were more complex than simple remnants of a prehistoric past, North American archaeology by and large hasn't embraced these theories, instead maintaining its general neoevolutionary track. This book will change that. Combining the latest empirical studies of archaeological practice with the latest conceptual tools of anthropological and historical theory, this volume seeks to set

a new course for hunter-gatherer archaeology by organizing the chapters around three themes. The first section offers diverse views of the role of human agency, challenging the premise that hunter-gatherer societies were bound by their interactions with the natural world. The second section considers how society and culture are constituted. Chapters in the final section take the long view of the historical process, examining how cultural diversity arises out of interaction and the continuity of ritual practices. A closing commentary by H. Martin Wobst underscores the promise of an archaeology of foragers that does not associate foraging with any particular ideology or social structure but instead invites inquiry into counterintuitive alternatives. *Hunter-Gatherer Archaeology as Historical Process* seeks to blur the divisions between prehistory and history, between primitive and modern, and between hunter-gatherers and people in other societies. Because it offers alternatives to the dominant discourse and contributes to the agenda of hunter-gatherer research, this book will be of interest to anyone involved in the study of

foraging peoples.

Geographies of Identity in Nineteenth-Century Japan University of Arizona Press

The authors consider the ways in which the high degree of ethnic diversity within the region is related to the nature of tropical Asian environments, on the one hand, and the nature of Southeast Asian political systems and the ways in which they manipulate natural resources, on the other. Rather than focus on defining the phenomenon of ethnicity, this book examines the different social evolutionary contexts in which the phenomenon is manifested. Companion volume to *Cultural Values and Human Ecology in Southeast Asia* (Michigan Papers no. 27).

CANALS AND COMMUNITIES

CRC Press

This collection of essays in the honor of David Brokensha focuses on issues which had concerned him throughout his professional career as an anthropologist. He emphasized on combining indigenous perspectives and knowledge in development planning and on sustainable natural resource management.

How US foreign policy affects state repression

The New Pacific Community in the 1990s

University of Arizona Press

This case study explores the impact of globalization on environmental and human well being in the coastal zone of Palawan Island in the Philippines. The reader will learn about histories, livelihoods, gender roles, socio-economic hierarchies, and the interdependency of fishing and farming in communities whose members are of different ethnic backgrounds and who originally settled or recently migrated to this region. Each of these communities has a unique pattern for using resources with a corresponding impact on the environment. Globalization affects local patterns of resource exploitation by causing population growth and introducing technologies and market forces that intensify destructive kinds of resource use. The movement to conserve the natural environment also has a global reach, as illustrated by an unsuccessful attempt to establish a series of marine protected

areas in the municipality of San Vicente. The author bases his assessment of this failure on interviews conducted in four of the ten communities in San Vicente, and on a comparative analysis of similar projects in the Philippines and elsewhere. Although officials cited technical problems, the failure to establish viable marine protected areas was primarily due to lack of real local participation and inattention to people's daily needs in pursuing their livelihoods. As infrastructure and the social environment change, some households on their own find new ways to make a living that reduce the pressure on marine resources. The author concludes by suggesting that conservation policies and projects have greater chance for success by facilitating appropriate new ways of making a living. University of Chicago Press

The only quantitative deforestation study to focus on one country, this case analysis of the Philippines since 1946 yields more concrete data than previous cross-national studies. David Kummer's close

examination of the interactions among political, economic, and cultural factors and their environmental consequences sheds light on similar situations in other countries.

The IBSS is the essential tool for librarians, university departments, research institutions and any public or private institution whose work requires access to up-to-date and comprehensive knowledge of the social sciences.

Aggression and Peacefulness in Humans and Other Primates Oxford University Press

The cultural and even physical extinction of the world's remaining tribal people is a disturbing phenomenon of our time. In his study of the Batak of the Philippines, James Eder explores the adaptive limits of small human populations facing the ecological changes, social stresses, and cultural disruptions attending incorporation into broader socioeconomic systems.

The Oxford Handbook of Political

Consumerism Ateneo de Manila University Press

This book explores the role of aggression in primate social systems and its implications for human behavior. Many people look to primate studies to see if and how we might be able to predict violent behavior in humans, or ultimately to control war. Of particular interest in the study of primate aggression are questions such as: how do primates use aggression to maintain social organization; what are the costs of aggression; why do some primates avoid aggressive behavior altogether. Students and researchers in primatology, behavioral biology, anthropology, and psychology will read with interest as the editors and contributors to this book address these and other basic research questions about aggression. They bring new information to the topic as well as an integrated view of aggression that combines important evolutionary considerations with developmental, sociological and cultural perspectives.

Batak Resource Management

Cambridge University Press

In this pioneering study, David L. Howell

looks beneath the surface structures of the Japanese state to reveal the mechanism by which markers of polity, status, and civilization came together over the divide of the Meiji Restoration of 1868. Howell illustrates how a short roster of malleable, explicitly superficial customs—hairstyle, clothing, and personal names— served to distinguish the "civilized" realm of the

Japanese from the "barbarian" realm of the Ainu in the Tokugawa era. Within the core polity, moreover, these same customs distinguished members of different social status groups from one another, such as samurai warriors from commoners, and commoners from outcasts.

PALAWAN AT THE CROSSROADS

Routledge

This report records traditional Batak beliefs, knowledge, and practice in the area of natural resource management. It assesses where Batak practices stand today and evaluates the prospects for community-based sustainable management.
