This study focuses on the corporate governance initiatives, laws and regulations aimed at enhancing the effectiveness of boards of public entities in Zimbabwe. The key question addressed is whether or not the corporate governance initiatives and legal and regulatory reforms in Zimbabwe are sufficient to enable boards of public entities to effectively discharge their duties and meet internationally accepted corporate governance standards. A comparative analysis of Zimbabwe's public entities corporate governance framework to that of South Africa (a developing country like Zimbabwe) and Australia (a developed country with similar common law heritage) is also conducted. Recommendations are made on how best to enhance the effectiveness of boards of public entities in order to promote good corporate governance practices in Zimbabwean public entities.

This sixth peer review of the OECD Principles of Corporate Governance analyses the corporate governance framework and practices relating to corporate risk management, in the private sector and in state-owned enterprises. The review covers 26 jurisdictions and is based on a general survey of all participating jurisdictions in December 2012, as well as an in-depth review of corporate risk management in Norway, Singapore and Switzerland. The report finds that while risk-taking is a fundamental driving force in business and entrepreneurship, the cost of risk management failures is often underestimated, both externally and internally, including the cost in terms of management time needed to rectify the situation. The reports thus concludes that corporate governance should ensure that risks are understood, managed, and, when appropriate, communicated.

### CORPORATE GOVERNANCE IN A CRISIS SITUATION

A financial system is only as strong as the governing practices and institutions of its participants. The challenge to build efficient and accountable financial institutions that promote confidence is a problem that private financial sector executives and policymakers confront together. In this context, Financial Sector Governance takes a clinical approach to addressing the challenges in emerging and developed markets in each industry: capital markets, private banks, state-owned banks, asset management companies, public pension funds, and mutual funds. It also explores the linkages between public and private sector governance, and the policy implications for strengthening both sides. Financial Sector Governance emerges from the fourth annual Financial Markets and Development conference, organized by the World Bank, the International Monetary Fund and the Brookings Institution, during which participants from the public and private financial sectors of emerging and developed markets contribute to an expanding dialogue addressing key policy concerns.

"This book written by Justine Chinoperekweyi is great, full of academic rigor and thorough in its coverage on corporate governance theories and best practices. It is well exemplified with case studies and guide readers prudently through different aspects of current corporate governance debates, not only for a specific region in Africa, but universally. This book is an essential (and much needed) addition to the body of knowledge of governance practitioners, academics, students and other related professionals. This multidisciplinary book has taken an innovative approach as it is linking corporate governance with complexity theories as well as provides substantial new insights into why governance systems are failing and what may be done to improve this situation. Well done Justine for this great work. I endorse and recommend this book to all my colleagues and friends." Mr. Kwanele Ngwenya (CEO, NBS Bank, Malawi) "Justine addresses one of the most important issues of our times, the need for transformation of corporate governance in the financial industry worldwide. Justine masterfully connects the dots between a variety of theories, well-known real-case examples, the unpredictable factor of human nature, the importance of leadership, and how organization development can weaken or strengthen the whole organization. The many dimensions and the complexity of the whole subject are presented in a clear, structured and easy to follow style." This book analyses how China's firms in the consumer electronics (CE) sector have developed their business strategy and corporate governance during the reform process. The CE sector is one of China's most important and dynamic manufacturing sectors. As one of the earliest market-oriented sectors after 1978, its experience illustrates the adoption of the Western model of management in China. This is the first book to analyse the link between business strategy, corporate governance and performance of firms, explicitly comparing state-, collective-, and privately-owned firms. This book argues that the competitive dynamics of the market are central to the survival of firms in contemporary China. Focuses on the state, collective and private Chinese firms in the consumer electronics sector Provides insights into the interactions among political, economic and corporate factors in the China business environment that influence the strategies and performance of these firms Compares the corporate governance of these Chinese firms across different ownership forms The Role of Board of Directors on Corporate Governance in Zimbabwe National Water Authority (ZINWA) GRIN Verlag

Much has been written about the economic and political problems of countries that are in the process of changing from centrally planned systems to market systems. Most studies have focused on the economic, legal, political, and sociological problems these economies have had to face during the transition period. However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. This book was written to help fill that gap. This book is the sixth in a series to examine accounting and financial system reform in transition and developing economies. The first book (Accounting and Financial System Reform in a Transition Economy: A Case Study of Russia) used Russia as a case study. The second volume in the series (Accounting and Financial System Reform in Eastern Europe and Asia)

The fourth volume (Accounting Reform in Transition and Developing Economies) examines accounting reform in transition and developing economies.

It is organized around fundamental principles, whereas multidisciplinary books on corporate governance often concentrate on specific topics. Specific topics include Relevant Theory and Methods, Organizational Economic Models as They Pertain to Governance, Managerial Career Concerns, Assessment & Monitoring, and Signal Jamming, The Institutions and Practice of Governance, The Law and Economics of Governance, Takeovers, Buyouts, and the Market for Control, Executive Compensation, Dominant Shareholders, and more. Establishing SBUs, strategic business units, in international markets is a global business strategy that a business organization can embark on as its expansion strategy. Expanding into the global market however has with it some challenges that need to be managed. The varying business environment, from the local market, is one of the challenges that needs to be carefully managed. The understanding of Porter's Diamond Model better positions a business in the global market. This paper is a discussion of the applicability of Porter's Diamond Model of Nations' competitiveness. In this discussion the case of KJ Transport, a local freight transport planning to venture into international business, is used. KJ Transport Zimbabwe is planning to expand into South Africa and Botswana market.

Master's Thesis from the year 2015 in the subject Business economics - Business Management, Corporate Governance, grade: 70.0, , course: Dissertation, language: English, abstract: This study was carried out to examine the nature of the relationship that exists between organizational learning and organizational performance of Zimbabwe's road haulage businesses. Literature on organizational learning and organizational performance was reviewed and a conceptual framework for the purpose of the study formulated. Information acquisition, information interpretation, information sharing, information quality and behaviour and cognitive changes were used to measure organizational learning. To measure organizational performance the researcher used financial, employee and market dimensions of company performance. Quantitative research methodology was used where data was gathered using a questionnaire. The questionnaire was carefully designed to collect the right data about organizational learning and organizational performance in the haulage business sector for analysis. A total of 120 questionnaires was administered where 105 were completed and returned. Out of the 105 questionnaires that were returned 2 had missing responses and these were discarded from data analysis. Thus, the study response rate was 85.8%. Statistical Package for the Social Sciences was used to analyse data. Descriptive statistics i.e. arithmetic means and standard deviations were used to describe how organizational learning is practised in the haulage business sector in Zimbabwe. Inferential statistics in the form of correlation and regression analysis were used to test answer research questions and to test research hypothesis. The main conclusion reached was that organizational learning is a partial predictor of company performance in Zimbabwe's haulage sector. Thus, the study partially confirms the study hypothesis. Based on the study conclusions, the study recommends that managers in the haulage business in Zimbabwe focus organizational learning practices to enhance business performance. Haulage companies' limited resources can be channelled towards enhancing information acquisition, information quality and individual behaviour and cognitive changes by individuals as these were found to positively contribute to company performance.

Due Diligence and Corporate Governance is a general guide to a subject of growing importance. This handbook shows you how due diligence is used to assess the risk of any transaction, customer or investor for all businesses regardless of size or location. There are three main reasons for the rise in the profile and uses of due diligence: . Companies are now doing deals all over the world and must be increasingly vigilant about the individuals and companies they are dealing with . Investors, consumers and the media are putting pressure on companies to avoid dealing with ethically, environmentally or socially irresponsible organisations . Internal controls must address the increasing regulatory requirements introduced in response to corporate scandals and the terrorist threat Due diligence allows companies to profile the companies and individuals they are thinking of dealing with before any commitment is made, providing an effective safeguard against criminal activity, reputational damage, or breaches of legislation. With its diverse coverage and focus on the practical uses of due diligence, combined with explanations and illustrations of best practice by case studies, diagrams and checklists, this handbook is the essential guide for all those involved in corporate transactions and risk management. The handbook: . Provides a broad introductory guide to due diligence . Examines due diligence in the context of risk management and corporate governance . Is straightforward, comprehensive and practical . Uses case studies to illustrate business users . Includes checklists to monitor risk management . Provides insights into comparative corporate governance framework
