Business Communication: Making Connections in a Digital World, 12/e by Lesikar, Flatley, and Rentz provides both student and instructor with all the tools needed to navigate through the complexity of the modern business communication environment. At their disposal, teachers have access to an online Tools & Techniques Blog that continually keeps them abreast of the latest research and developments in the field while providing a host of teaching materials. *Business Communication* attends to the dynamic, fast-paced, and ever-changing means by which business communication occurs by being the most technologically current and pedagogically

effective books in the field. It has realistic examples that are both consumer-and business-oriented.

(Un)Equal Pathways to Higher Education Springer

Now that the U.S. Supreme Court has declared school voucher programs constitutional, the many unanswered questions concerning the potential effects of school choice will become especially pressing. Contributors to this volume draw on state-of-the-art economic methods to answer some of these questions, investigating the ways in which school choice affects a wide range of issues. Combining the results of empirical research with analyses of the basic economic forces underlying local education markets, *The Economics of School Choice* presents evidence concerning the impact of school choice on student achievement, school productivity, teachers, and special education. It also tackles difficult questions such as whether school choice affects where people decide to live and how choice can be integrated into a system of school financing that gives children from different backgrounds

equal access to resources. Contributors discuss the latest findings on Florida's school choice program as well as voucher programs and charter schools in several other states. The resulting volume not only reveals the promise of school choice, but examines its pitfalls as well, showing how programs can be designed that exploit the idea's potential but avoid its worst effects. With school choice programs gradually becoming both more possible and more popular, this book stands out as an essential exploration of the effects such programs will have, and a necessary resource for anyone interested in the idea of school choice.

The Mindful Geek United Nations Education, Scientific & Cultural Organization

Mathematics has become indispensable in the modelling of economics, finance, business and management. Without expecting any particular background of the reader, this book covers the following mathematical topics, with frequent reference to applications in economics and finance: functions, graphs and equations, recurrences (difference equations),

differentiation, exponentials and logarithms, optimisation, partial differentiation, optimisation in several variables, vectors and matrices, linear equations, Lagrange multipliers, integration, first-order and second-order differential equations. The stress is on the relation of maths to economics, and this is illustrated with copious examples and exercises to foster depth of understanding. Each chapter has three parts: the main text, a section of further worked examples and a summary of the chapter together with a selection of problems for the reader to attempt. For students of economics, mathematics, or both, this book provides an introduction to mathematical methods in economics and finance that will be welcomed for its clarity and breadth.

Social Origins and Destinations of Colombian Graduates World Bank Publications

The International Working Group on Education (IWGE) is an informal network of aid agencies and foundations. Since its inception in 1972 it has provided a forum for donor agencies and their representatives to exchange information and work closely together on education issues. This publication presents the results from the 2012 IWGE meeting which focused on the topic "From schooling to learning." It summarizes the discussions in the 'show and tell' sessions on recent developments in the participating agencies, as well as the discussions in the plenary sessions.

GLOBALIZATION'S CONTRADICTIONS

McGraw-Hill/Irwin

Inequality of educational opportunities (IEO) is a recurring topic in both public debate and academic research. This book contributes to the contemporary discussion on IEO with a focus on individual trajectories over the life course. It provides empirical evidence on the magnitude and the mechanisms of IEO in Colombia, a country with extreme, persistent levels of social inequality. Using national administrative databases, the author examines the effect of social origin on academic and labor market outcomes among university graduates. Drawing on a comprehensive theoretical approach to stratification and higher education, this volume discusses how the interaction between family background and segmentation of educational institutions might influence individuals' outcomes. As

such, it will appeal to scholars, policy makers, and practitioners with interests in education, social inequality, social policy, higher education research, and international/comparative education.

Raising Student Learning in Latin America World Bank Publications

"For the third time in three decades world leaders reaffirmed their promise of "Education For All" when adopting Sustainable Development Goal 4 in 2015. It is the most far-reaching commitment to quality and equity in education so far, yet, there is no consensus on what the agenda means in practice. With a decade left until the 2030 deadline, Goal Four calls upon the education community to engage more thoughtfully and critically with SDG 4 and related efforts. As an ever-growing number of actors and initiatives claim to contribute to its achievement, it is becoming clear that the ambitious but broad priorities within the goal are vulnerable to cherry-picking and misrepresentation, placing it at the heart of tensions between instrumentalist and rights-based approaches to education. This text, a critical analysis of SDG 4, provides a framework for examining trends and developments in education globally. As the first volume that examines early implementation efforts under SDG 4, Goal Four formulates a critique along with strategies for moving forward. By scrutinising the challenges, tensions and power dynamics shaping SDG 4, it advances rights-based perspectives and strategies for effective implementation and builds capacity for strengthened monitoring and analysis of the goal"--

THE CHALLENGE FOR THE 21ST CENTURY

World Bank Publications

In November 1991 the American flag was lowered for the last time at Clark Air Base in the Philippines. This act brought to an end American military presence in the Philippines that extended back over 90 years. It also represented the final act in a drama that began with the initial rumblings in April of that year of the Mount Pinatubo volcano, located about nine miles to the east of Clark. This book tells the remarkable story of the men and women of the Clark community and their ordeal in planning for and carrying out their evacuation from Clark in face of the impending volcanic activity. It documents the actions of those who remained on the base during the series of Mount Pinatubo's eruptions, and the packing out of the base during the subsequent months. This is the story of the Ash Warriors, those Air Force men and women who carried out

their mission in the face of an incredible series of natural disasters, including volcanic eruption, flood, typhoons, and earthquakes, all of which plagued Clark and the surrounding areas during June and July 1991.

Calculus for a New Century Routledge

The main thesis of this book is that, given that South African education faces major challenges, the BRICS (Brazil, Russia, India, China and South Africa) constellation of states offers — thus far overlooked — a valuable tertium comparationis, a source of international comparative perspectives, to inform the domestic scholarly discourse on education. This book first investigates the national contexts and development of education in the BRICS countries, arguing that this grouping represents a valuable but yet overlooked field for illuminating South African education issues with international perspectives. The book consists of chapters arguing for and illustrating this thesis from a variety of angles. Common to all chapters is that authors used the comparative method in education, that is comparing the national education system, in their education societal context interrelationships, of the BRICS countries. The chapters focus on a number of critical issues in South African education, including the language of learning and teaching issue, the alignment of the world of education with the world of work, early childhood education, and the development of world-class universities. Regarding the last, for example, China has been the terrain of the most intensive national projects of establishing world-class universities, with Project 985, Project 211, and the "Double First Class University" project. The chapters demonstrate what South Africa, in approaching her education issues, can learn from the experience of the BRICS countries.

Growing Smarter AOSIS

He offers policy options that can enable state and federal governments to increase investment in higher education.

THE EARLY GRADE READING ASSESSMENT Irwin Professional Publishing

This book features a diverse set of perspectives all focused towards questioning the role schools actually play in society and, more importantly, the role they could potentially play. Containing papers presented at the 1st International Conference on Reimagining Schooling which took place in Thessaloniki, Greece, June 2013, bringing together international and multi-disciplinary perspectives on the future of education and schools. Combines diverse specialties analyzing schools as

organizations and questions the purpose of schools. The book explores the current purpose of schooling and debates what roles and values young people currently learn from schooling. It examines such issues as the impact of Neoliberalism, the pursuit of the socially just school, and imagining contemporary schools beyond their consumerist mentality. Tackling development in the growing economic and social crisis in Europe, and offering transformative analysis of the psychology and decision-making involved for innovating teaching, learning, socio-economic and policy contexts. In addition, the book shows different ways young people can be creatively involved in reimagining schooling. It also details both innovative and radical ideas that currently exist about school transformation such as building learning partnerships for all and creating synergies across formal and informal settings of learning. Raising important questions for the future of the relationship between teacher and pupil and positive and pro-active behavior. There is a growing realization that schools fail to accommodate diverse types of learning and that their purpose is not simply about education. Featuring academics and practitioners from many different disciplines, this book boldly questions the values that currently permeate school walls and suggests ways that schooling itself can be made better.

Student Learning in South Asia World Bank Publications

Understanding what and how students learn has emerged as a salient issue in Latin America, a region where the majority of children now have access to schools but few students learn the skills they need to succeed. 'Raising Student Learning in Latin America' examines recent advances in our understanding of the policies and programs that affect student learning and provides policy makers with effective options. This volume relies on indicators from national and international assessments of subject matter knowledge plus intermediate learning indicators, such as dropout and completion rates. The first part focuses on the central role of student learning in education. The second part reviews the evidence on factors and policies that affect student learning. The final part addresses policy options on education quality assurance.

Secular Meditation for Smart Skeptics

World Bank Publications

Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first

ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.

Mathematics with Applications in Management and Economics Department of the Air Force

A growing body of research suggests that the quantity and quality of structural inputs of education and healthcare services such as infrastructure, classroom and medical supplies, and even teacher and medical training are largely irrelevant if teachers and healthcare providers do not exert the requisite effort to translate these inputs into effective teaching and medical service. To exert adequate effort, providers must feel they are accountable for the quality of service they provide. Yet a sense of accountability among providers does not necessarily occur naturally, often

requiring mechanisms to monitor and incentivize provider effort. The literature on improving provider accountability has under-emphasized the role of monitoring practices by school principals and chief medical officers. This study begins to fill this gap by investigating the role of within-facility accountability mechanisms in the education and health sectors of Jordan. To do this, an analysis of existing and original data from these sectors was conducted in which the association of within-facility monitoring and provider effort was quantified. The results indicate that within-facility monitoring is underutilized in both sectors and is a consistent predictor of higher provider effort.

PRACTICE, POLICY, AND RESEARCH ACROSS COUNTRIES AND REGIONS

Irwin/McGraw-Hill

Despite strong recent economic growth, Sub-Saharan Africa has levels of economic transformation, poverty reduction, and skill development far below those of other regions. Smart investments in developing skills—aligned with the policy goals of productivity growth, inclusion, and adaptability—can help to accelerate the region's economic transformation in the 21st century. Sub-Saharan Africa's growing working-age population presents a major opportunity to increase shared prosperity. Countries in the region have invested heavily in building skills; public expenditure on education increased sevenfold over the past 30 years, and more children are in school today than ever before. Yet, systems for building skills in this population have fallen short, and these shortcomings significantly impede economic prospects. In half of the countries, fewer than two in every three children complete primary school; even fewer reach and complete higher levels of education. Learning outcomes have been persistently poor, leading to substantial gaps in basic cognitive skills—literacy and numeracy—among children, young people, and adults. The literacy rate of the adult population is below 50 percent in many countries; functional literacy and numeracy rates are even lower.

Systemwide change is required to achieve significant progress. Multiple agencies at the central and local levels are involved in skills development strategies, making skills "everyone's problem but no one's responsibility." Policies and reforms need to build capacity for evidence-based policies and create incentives to align the behaviors of all stakeholders with the pursuit of national skills development goals. The Skills Balancing Act in Sub-Saharan Africa: Investing in Skills for

Productivity, Inclusivity, and Adaptability lays out evidence to inform the policy choices that countries will make in skill investments. Each chapter addresses a set of specific questions, drawing on original analysis and synthesis of existing studies to explore key areas:

- How the skills appropriate to each stage of the life cycle are acquired and what market and institutional failures affect skills formation
- What systems are needed for individuals to access these skills, including family investments, private sector institutions, schools, and other public programs
- How those systems can be strengthened
- How the most vulnerable individuals—those who fall outside the standard systems and have missed critical building blocks in skills acquisition—can be supported.

Countries will face trade-offs—often stark ones—that will have distributional impacts and a bearing on their development path. Committed leaders, reform coalitions, and well-coordinated policies are essential for taking on the skills balancing act in Sub-Saharan Africa.

East Asia Pacific at Work Mathematics with Applications in Management and Economics

The Mindful Geek tells you how to derive the real world benefits of hardcore mindfulness meditation without drinking the metaphysical Kool-Aid. Meditation teacher, Michael W. Taft gives you step-by-step instructions in the powerful and reliable techniques of mindfulness meditation, and outlines the psychological and neuroscientific research underpinning these practices. By treating mindfulness as a scientifically-based, psychological technique, you can keep your atheistic or agnostic secular skepticism and still maintain a powerful, regular, and deeply effective meditation practice. That's because meditation doesn't require you to believe in it to work. Like any good technology, if you use it correctly, it will do the job reliably whether you believe in it or not. And-make no mistake-meditation is a kind of technology; a technology for hacking the human wetware in order to improve your life. This book is a practical, hands-on manual about how to make the most of that technology for yourself. If you are smart, skeptical, technically-inclined, and have a desire to see what meditation is really all about, this book is for you. Michael has taught a lot of meditation programs at tech corporations like Google,

so this material has been field-tested on some world-class geeks.

Influences of the IEA Civic and Citizenship Education Studies University of Chicago Press

Learning is the foundation of the human experience. It begins at birth and never stops, a continuous and malleable link across life stages of human development. Disparities in learning access and outcomes around the world have deep consequences for income, social mobility, health, and well-being. For international development practitioners faced with today's unprecedented environmental and geopolitical pressures, learning should be viewed as a touchstone and target for those seeking to truly effect global change. This book traces the path of international development work—from its pre-colonial origins to the emergence of economics as the dominant discipline in the field—and lays out a new agenda for policymakers, researchers, and practitioners, from early education through adulthood. Learning as Development is an attempt to rethink international education in a changing world.

Learning as Development Springer
 Since the 1980s, globalization and neoliberalism have brought about a comprehensive restructuring of everyone's lives. People are being 'disciplined' by neoliberal economic agendas, 'transformed' by communication and information technology changes, global commodity chains and networks, and in the Global South in particular, destroyed livelihoods, debilitating impoverishment, disease pandemics, among other disastrous disruptions, are also globalization's legacy. This collection of geographical treatments of such a complex set of processes unearths the contradictions in the impacts of globalization on peoples' lives. Globalizations Contradictions firstly introduces globalization in all its intricacy and contrariness, followed on by substantive coverage of globalization's dimensions. Other areas that are covered in depth are: globalization's macro-economic faces globalization's unruly spaces globalization's geo-political faces ecological globalization globalization's cultural challenges globalization from below fair globalization. Globalizations

Contradictions is a critical examination of the continuing role of international and supra-national institutions and their involvement in the political economic management and determination of global restructuring. Deliberately, this collection raises questions, even as it offers geographical insights and thoughtful assessments of globalization's multifaceted 'faces and spaces.'

LESIKAR'S BUSINESS COMMUNICATION

JHU Press

This open access book identifies the multiple ways that IEA's studies of civic and citizenship education have contributed to national and international educational discourse, research, policymaking, and practice. The IEA International Civic and Citizenship Education Study (ICCS), first conducted in 2009, was followed by a second cycle in 2016. The project was linked to the earlier IEA Civic Education Study (CIVED 1999, 2000). IEA's ICCS remains the only large-scale international study dedicated to formal and informal civic and citizenship education in school. It continues to make substantial contributions to understanding the nature of the acquired civic knowledge, attitudes, and participatory skills. It also discusses in-depth how a wide range of countries prepare their young people for citizenship in changing political, social, and economic circumstances. The next cycle of ICCS is planned for 2022. In this book, more than 20 national representatives and international scholars from Europe, Latin America, Asia, and North America assess how the processes and findings of the 2009 and 2016 cycles of ICCS and CIVED 1999/2000 have been used to improve nations' understanding of their students' civic knowledge, beliefs, attitudes, current civic-related behaviors, and intentions for future participation in a comparative context. There are also chapters summarizing the secondary analysis of those studies' results indicating their usefulness for educational improvement and reflecting on policy issues. The analyses and reflections in this book provide timely insight into international educational discourse, policy, practice, and research in an area of education that is becoming increasingly important for many societies.
