Judges & Generals In Pakistan: Vol-II by Inam R Sehri is another book comprising of his articles [in continuity with Vol-I]; mostly covering the historical scenarios of Gen Musharraf's military regime from years 2000-08. The main emphasis remained on militarized governance and alleged compromises of the Supreme judiciary. Vicious accounts of corruption are also there to prove that very few military Generals were equally competent to plunder the national wealth at par with bureaucrats & politicians. Death of Benazir Bhutto is discussed in detail. Facts about the judicial turmoil (2007), sending home the Chief Justice, reinstating and putting him [along with his fellow judges] in illegal confinement, are all set inside.

"The definitive reference for budding and experienced cancer epidemiologists alike." -American Journal of Epidemiology
"Practitioners in epidemiology and oncology will find immense value in this." -JAMA Since its initial publication in 1982, CANCER EPIDEMIOLOGY AND PREVENTION has served as the premier reference work for students and professionals working to understand the causes and prevention of cancer in humans. Now revised for the first time in more than a decade, this fourth edition provides a comprehensive summary of the global patterns of cancer incidence and mortality, current understanding of the major causal determinants, and a rationale for preventive interventions. Special attention is paid to molecular epidemiologic approaches that address the wider role of genetic predisposition and gene-environment interactions in cancer etiology and pathogenesis. New and timely chapters on environmental and social-epidemiologic factors include: · The role of social class disparities · The role of obesity and physical inactivity · The potential effects of electromagnetic fields and radiofrequency

radiation · The principles of cancer chemoprevention For both seasoned professionals and newer generations of students and researchers, this fourth edition of CANCER EPIDEMIOLOGY AND PREVENTION remains the authority in the field -- a work of distinction that every lab, library, student, professional, or researcher should have close at hand.

Reservoir Characterization is a collection of papers presented at the Reservoir Characterization Technical Conference, held at the Westin Hotel-Galleria in Dallas on April 29-May 1, 1985.

Conference held April 29-May 1, 1985, at the Westin Hotel—Galleria in Dallas. The conference was sponsored by the National Institute for Petroleum and Energy Research, Bartlesville, Oklahoma. Reservoir characterization is a process for quantitatively assigning reservoir properties, recognizing geologic information and uncertainties in spatial variability. This book contains 19 chapters, and begins with the geological characterization of sandstone reservoir, followed by the geological prediction of shale distribution within the Prudhoe Bay field. The subsequent chapters are devoted to determination of reservoir properties, such as porosity, mineral occurrence, and permeability variation estimation. The discussion then shifts to the utility of a Bayesian-type formalism to delineate qualitative "soft" information and expert interpretation of reservoir description data. This topic is followed by papers concerning reservoir simulation, parameter assignment, and method of calculation of wetting phase relative permeability. This text also deals with the role of discontinuous vertical flow barriers in reservoir engineering. The last chapters focus on the effect of reservoir heterogeneity on oil reservoir. Petroleum engineers, scientists, and researchers will find this book of great value.

For over forty years in more than sixty countries, Raymond Baker has witnessed the free-market system operating illicitly and corruptly, with devastating consequences. In Capitalism's Achilles Heel, Baker takes readers on a fascinating journey through the global free-market system and reveals how dirty money, poverty, and inequality are inextricably intertwined. Readers will discover how small illicit transactions lead to massive illegalities and how staggering global income disparities are worsened by the illegalities that permeate international capitalism. Drawing on his

experiences, Baker shows how Western banks and businesses use secret transactions and ignore laws while handling some \$1 trillion in illicit proceeds each year. He also illustrates how businesspeople, criminals, and kleptocrats perfect the same techniques to shift funds and how these tactics negatively affect individuals, institutions, and countries.

Cancer Epidemiology and Prevention Capitalism's Achilles Heel Tropentag is an annual international conference on food security, natural resource management and rural development. Tropentag 2017 is organised by the University of Bonn, Germany, jointly with the Council for Tropical and Subtropical Research (ATSAF e.V) in cooperation with the GIZ Advisory Service on Agricultural Research for Development (BEAF). This year's Conference theme is "Future Agriculture: social-ecological transitions and bio-cultural shifts". Future agriculture is by definition an emerging phenomenon. It is continuously in the making, while present visions of the future turn into history. Vast stretches of land in developing countries are being put to new uses, with new forms of governance, new ownership patterns and new forms of production. Particularly agricultural systems are undergoing drastic changes, unfolding an enormous transformative power and affecting millions of people. System-immanent attributes such as visions, aspirations, cultural specifics and production factor availability shape the response of land users to growing external pressures such as climate change, market demands, land degradation, emerging diseases and policies. In addition to such social-ecological transitions, substantial bio-cultural shifts occur and are imposed by centrally-planned establishments of large-scale intensification (or conservation) corridors and protection zones, or are associated with infrastructure development and urbanisation processes. A wide array of resulting response pathways and land use or production strategies emerge that may be beneficial for rural and urban populations, but can also lead to abandonment of land, migration and conflicts.

Nowadays software engineers not only have to worry about the technical knowledge needed to do their job, but they are increasingly having to know about the legal, professional and commercial context in which they must work. With the explosion of the Internet and major changes to the field with the

introduction of the new Data Protection Act and the legal status of software engineers, it is now essential that they have an appreciation of a wide variety of issues outside the technical. Equally valuable to both students and practitioners, it brings together the expertise and experience of leading academics in software engineering, law, industrial relations, and health and safety, explaining the central principles and issues in each field and shows how they apply to software engineering.

This publication is the second in a series of lessons learned reports which examine how the U.S. government and Departments of Defense, State, and Justice carried out reconstruction programs in Afghanistan. In particular, the report analyzes security sector assistance (SSA) programs to create, train and advise the Afghan National Defense and Security Forces (ANDSF) between 2002 and 2016. This publication concludes that the effort to train the ANDSF needs to continue, and provides recommendations for the SSA programs to be improved, based on lessons learned from careful analysis of real reconstruction situations in Afghanistan. The publication states that the United States was never prepared to help create Afghan police and military forces capable of protecting that country from internal and external threats. It is the hope of the Special Inspector General for Afghanistan Reconstruction (SIGAR), John F. Sopko, that this publication, and other SIGAR reports will create a body of work that can help provide reasonable solutions to help United States agencies and military forces improve reconstruction efforts in Afghanistan. Reservoir Characterization Morgan Kaufmann
Enterprise Resource Planning (ERP) implementations can be costly for any company. While there are advantages to size and funding in larger businesses (500+ employees), there are critical success factors of the ERP process that small- to mid-size manufacturing (or other types of business organizations) can use to increase their rate of success for ERP. This must-buy book outlines research that targeted specific factors that increase any ERP implementation's success. Critical success factors were identified, and ranked, by 50+ subject matter expert consultants in the ERP field in this study. These SMEs, all with more than five years of experience in implementing ERPs for manufacturers, provided a consensus for best-practices factors vital for consideration for the ERP implementation, before, during, and after the exercise. Critical factors (failure and success) are highlighted for the planning, process, and follow-up, with positive internal and external results from the executive (top-down) buy-in to the communications and transparency of the process to middle management and line employee stakeholders. The vital points in the conclusion offer guidance to organizations, as well as ERP consultants, that are considering ERP implementation, even if the entity is not in the manufacturing industry. If you or your company is seriously considering an ERP project, this book is a required reading for industry intelligence and analytic insight. Proceeds from this book will benefit The Sydney Goldston Scholarship Foundation to make the dreams for future leaders a reality. The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.
