Facilities Management (FM) and  
Corporate Real Estate Management  
(CREM) are two closely related and  
relatively new management disciplines  
with developing international professions  
and increasing academic attention. Both  
disciplines have from the outset a strong  
focus on controlling and reducing cost  
for real estate, facilities and related  
services. In recent years there has been  
a change towards putting more focus on

how FM/CREM can add value to the  
organisation. This book is driven by the  
need to develop a widely accepted and  
easily applicable conceptual framework  
of adding value by FM and CREM. It  
presents the state of the art of  
theoretical knowledge and empirical  
evidence about the impact of buildings  
and facilities on 12 value parameters  
and how to manage and measure these  
values. The findings are connected to a  
new Value Adding Management model.  
The book is research based with a focus  
on guidance to practice. It offers a  
transdisciplinary approach, integrating  
academic knowledge from a variety of  
different fields with practical experience.

It also includes 12 interviews with practitioners, shedding light as to how they manage adding value in practice. This is a much needed resource for practitioners, researchers and teachers from the field of FM and CREM, as well as students at both undergraduate and postgraduate level.

It is estimated that literally billions of residents in urban and peri-urban areas

of Africa, Asia, and Latin America are served by onsite sanitation systems (e.g. various types of latrines and septic tanks). Until recently, the management of faecal sludge from these onsite systems has been grossly neglected, partially as a result of them being considered temporary solutions until sewer-based systems could be implemented. However, the perception of onsite or decentralized sanitation technologies for urban areas is gradually changing, and is increasingly being considered as long-term, sustainable options in urban areas, especially in low- and middle-income countries that lack sewer infrastructures. This is the first book dedicated to faecal sludge management. It compiles the current state of knowledge of the rapidly

evolving field of faecal sludge management, and presents an integrated approach that includes technology, management, and planning based on Sandecs 20 years of experience in the field. *Faecal Sludge Management: Systems Approach for Implementation and Operation* addresses the organization of the entire faecal sludge management service chain, from the collection and transport of sludge, and the current state of knowledge of treatment options, to the final end use or disposal of treated sludge. The book also presents important factors to consider when evaluating and upscaling new treatment technology options. The book is designed for undergraduate and graduate students, and engineers and

practitioners in the field who have some basic knowledge of environmental and/or wastewater engineering.

Future economic growth lies in the value of experiences and transformations-- good and services are no longer enough. We are on the threshold, say authors Pine and Gilmore, of the Experience Economy, a new economic era in which all businesses must orchestrate memorable events for their customers. The Experience Economy offers a creative, highly original, and yet eminently practical strategy for companies to script and stage the experiences that will transform the value of what they produce. From America Online to Walt Disney, the authors draw from a rich and varied mix of examples that showcase businesses in the midst of

creating personal experiences for both consumers and businesses. The authors urge managers to look beyond traditional pricing factors like time and cost, and consider charging for the value of the transformation that an experience offers. Goods and services, say Pine and Gilmore, are no longer enough. Experiences and transformations are the basis for future economic growth, and The Experience Economy is the script from which managers can begin to direct their own transformations.
