MORPHOMETRIC AND LAND USE ANALYSIS FOR WATERSHED

...
Morphological parameters have been recurrently used to assess the hydrological

response of a watershed. Due to a strong mutual correlation between the run-off characteristics and the terrain of a watershed, the method is significantly popular, especially in

an un-gauged catchment. In the present study, the hydrologic response of a Himalayan watershed and its sub-watersheds is discussed using various morphological parameters, and

accordingly, the sub-watershed prioritization has been done.
