 MQCC™ Money Quality Conformity Control  
 Organization incorporated as MortgageQuote Canada Corp.

Welcome to the public disclosure of the world's first body of required reading for ALL duly appointed, lawfully elected or employed persons in public office or in private enterprise, as leaders; legislators, policymakers; regulators; technical experts; scientists; members of Top Management; global professional liability insurers including corporate risk insurers; legal professionals; law enforcement; and business persons; promoters; consultants; investors; students - in at least 119 countries - who

seek primary source, traceable, verifiable and immutable knowledge on the origins, commercialization, litigation-testing and National and International Standardization of the "Principles of 'BlockChain'" and related concept system subject matter: including but not limited electronic peer-to-peer finance (non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading; (P2P)/Private/Crypto/Secret/Shadow) utility tokens, securities token. This global public disclosure is designed to be your practical and scholarly, primary source knowledge commencing from at least as early as 14-August-2001 until present day (September 2019 - or as of latest update) on the origin of the "Principles of 'BlockChain'" and related concept system matter; and is designed to be

relied upon as a legislative-, regulatory-, public policy-making-, academic-, business-, investment-, professional-, technical-, and scientific reference, now and into the future. As an electronic - (intellectual property token; trademark brand: MQCC InPUT™ ) - format encyclopedic authoritative reference, this First Edition will be continually improved until the next edition is published. If you are a lawfully elected or duly appointed public official (Head of State, Senator, Minister, Legislator, Policy Maker, Regulator); lawfully elected, duly appointed or employed member of a regulated, reporting or private organization in the role of Top Management (Chief Executive Officer (CEO)- level or Board of Director-level) member; a legal professional; an professional liability insurance/organization

risk underwriter; an investor, academic or interested person: before you spend any of your personal money (or any more personal money) and your valuable personal time on 'BlockChain'-anything or 'crypto'-anything; put this electronic reference [intellectual property utility token (distinctively known as the MQCC™ - registered, global trademark: MQCC InPUT™)] in your personal library and learn directly from the person (Author) who: <\*> first identified and commercialized (starting at least as early as April 9, 2005) a globally accessible, peer-to-peer electronic finance system; (cryptofinancial network). <\*> first registered (starting at least as early as May 9, 2008) a subordinate Quality Management System to ISO 9001:2000; ISO 9001:2008 and the current risk-based ISO 9001:2015 in order to publicly prove to "the world", that the globally accessible system-network methods and products are better, safer, more efficient and in order to establish at-a-glance (prima facie) levels of trust - at a global scale; <\*> Over the past 19 years, has personally

introduced and educated the following classes of people on the origins and over-14 years of successfully commercialized, National and International consensus-standards-based, application the overarching concept system including: the "Principles of 'BlockChain'; utility tokens, securities tokens, conformity science: \*> public officials (Ministers, Legislators, Policy Makers, Regulators) \*> lawyers employed by law enforcement agencies \*> lawyers employed by public market securities regulators \*> CEO's, Executive Officers, members of Top Management of regulated, reporting or private business organizations \*> retail customers (investors and investees) \*> and more <\*> Developed, what is today, the world's most trusted and trustworthy global system-network of its kind that, for over 12 years, meets and exceeds United States a (US) Department of Defense (DoD), General Services Administration (GSA), and the National Aeronautics and Space Administration (NASA) Higher-level contract quality requirements and integrates elements of the

globally trusted US National Institute of Standards and Technology (NIST) Framework Core for Improving Critical Infrastructure Cybersecurity. This encyclopedic authoritative reference takes you from the start, from at least as early as 14-August-2001 to Present day (September 2019). Now that this compendium is published, if any consultant or business promoter, anywhere in the world (at least in 119 countries where ISO 9000 is considered a National Standard class of family of standards) on matters claims to know what he or she is talking about and has not proven to you that they have read this important work of public disclosure, then they really don't know scientific-based, historically-accurate, information timeline. -> Learn how the Author has been telling CryptoExchange CEO's to learn the MQCC Standards™, so they can make their cryptoexchanges better, safer and more efficient for the inexperienced global public and regulatory community -- months (and years) before sad events

occurred when some exchanges suffered catastrophic shutdowns because Top Management did not have and still do not have, the historically proven systems that they need to assure better, safer and more efficient cryptofinancial operations; which MQCC developed. --> Learn how some CEO's or Top Management of Banks and Public Securities Exchanges have been explained that an over 14 year-old fully functional system built on the "Principles of 'BlockChain'" exists and will prevent corporate shareholder financial loss caused by risk due to uncertainty created by nonconformity events like mortgage fraud and ineffective public (reporting securities issuer) company operators. -> Learn how a proven regulatory-integrated framework of co-existence between public securities regulators and non-public securities regulators and regulatees has evolved since at least as early as August 14, 2001. -> Learn how the term Bungay Unification of Quantum Processes Algorithm also represented as the "Principles of 'BlockChain'" was

abstracted from observation of the originating object or phenomenon. -> Learn how to find out who is a competent consultant and who is not a competent consultant on matters related to the "Principles of 'BlockChain'" -> Learn how to the global community has misunderstood the origins and wasted (in some cases, literally) millions of dollars in ideas that are "BlockChain-in-Name-Only". -> Learn how "The Principles of 'BlockChain'" have nothing to do with computer programming language C++; which was used to program the bitcoin, alpha-state, experimental software program. -> Learn about the discovery and commercialization of SYSTEMS-LEVEL Artificial Intelligence (SL) by the yours sincerely. -> Learn how commercially available suite of systems, technology, services and products work for any size organization: 1 owner-operator to an organization with 1,000,000 million employees and more. This encyclopedic authoritative reference will be your best investment in this subject matter, ever. More about this encyclopedic authoritative reference

The "Principles of 'BlockChain'" were naturally discovered out of a need to create a governance and operating system for the world's first "peer-to-peer (P2P) electronic finance system-network" for the trade in non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading securities and related financial instruments; commencing from at least as early as August 14, 2001. As a reminder, before you invest or spend any money on "BlockChain"-anything, or "crypto"-anything; learn from from the person who first discovered and then commercialized it, since at least as early as April 9, 2005 at [www.private lender.org](http://www.private lender.org); a person who also happens to be the world's leading authority on National and International Standards-Class NISC™ (in at least 119 countries), Quality Management System-integrated, regulatory-integrated, litigation-tested, BlockChain-based Systems, Technology, Services and Products. WARNING: If you have any question of comprehension or understanding, seek professional counsel

before you - another friendly reminder - spend even one more unit of fiat currency ("real" money) on any "BlockChain" or "Crypto" project. Ask your local legislator, lawyer or, in the future your local conformity scientist and PROFESSIONAL BLOCKCHAIINEER™/®. Remember this authoritative encyclopedic reference is written by the person who developed the world's first commercialized an application of the "Principles of 'BlockChain'" in Commerce for a peer-to-peer electronic finance system. A body of transmudane knowledge encompassing a variety of knowledge disciplines. Having built "it" first and having built "it" right, means - despite being the CEO of a commercial finance sector organization - the Author is more or less "under the radar" from the scrutiny of the general public due to successful application of the sub-principle "effective disintermediation"; as such, nobody on Earth has really been afforded an opportunity to "look behind the history" - in a single, primary source compendium - to see how delicate, comprehensive,

complex and beneficial conformity science and the "Principles of 'BlockChain'", truly are. Not to mention the painstaking diligent years of maintaining the momentum. If you, your family, your company or your country is even "thinking" about investing limited sovereign resources and valuable time into the "Principles of 'BlockChain'", "crypto"-anything, "token"-anything and related matters (or want to be an authority on the subject), then learn about its origins, its regulatory-scrutinized, litigation-tested commercial applications of the present-day, and its future. Especially if you are (or will be, one day) employed as a Head of State, Legislator, Policymaker, Regulator, Lawyer, member of "Top Management" (Chief Executive Officer (CEO) or Board Member of a regulated or non-regulated Organization, Academic (student, undergraduate, graduate, doctoral, post-doctoral research), Journalist, Professional Liability Insurer, Investor, Head of a Family Office; or, if you are your normal, everyday person, just curious about the world. This work of

scientific-commercial-regulatory-financial literature is both a public service and an introduction to the foundational body of knowledge that led to the discovery of the "Principles of 'BlockChain'", the birth of binary digit non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading securities and related financial instruments; also known as Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow securities and related financial instruments; Binary Digit Financial Instruments or Digital Assets and the Discovery of Conformity Science. It is the foundation of evolutionary digital commerce (a new field of science for the study of the evolutionary (revolutionary, perhaps?) processes related to the discovery of the "Principles of 'BlockChain'" and production of binary digit financial instruments (digital assets), systems, technologies, services and products. The body of evidence - as you would expect from the creator of a system built on principles that creates trust through transparency,

immutability, validation, traceability and verifiability - is itself, traceable, verifiable, immutable and transparent. You will not find this content anywhere else. MQCC is the point of origination. The Bungay Unification of Quantum Processes Algorithm: when Quantum Unification Theory met Commerce. A revolutionary paradigm shift in how commerce is transacted, allowing for realizable quality, conformity and control goals to be achieved; resulting in long term, sustainable inflows of money. And lots of it. If you agree that the "Principles of 'BlockChain'" offer the utmost level of immutable data (knowledge) veracity, validity, verifiability, transparency, proof and truth; then you will understand the non-trivial implications of this history of the discovery of the "Principles of 'BlockChain'". Origin of a Specie™: an authoritative encyclopedic reference that only the discoverer of the world's first globally accessible, regulatory-recognized, regulatory-integrated and regulatory-trusted, commercialized "Principles of 'BlockChain'" -based

system for the trade in non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading securities and related financial instruments; also known as Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow securities and related financial instruments (Binary Digit Utility Tokens for Digital Assets), could write.

### **MEASURING FINANCIAL INCLUSION AND THE FINTECH REVOLUTION**

E53 Publishing LLC  
This NFT book is the complete practical easy to read and follow guide for beginners to invest in NFTs.  
*Distributed Computer and Communication Networks: Control, Computation, Communications* McGraw Hill Professional  
Accessible and fun to read, this practical book contains a collection of stories of organizations using blockchain technology in practice. Through deep research and firsthand interviews, authors Sir John Hargrave and Evan Karnoupakis show you how leading-edge organizations have worked to integrate blockchain into their businesses. You'll start by

exploring the origins of blockchain, with plain-English descriptions of industry terminology like bitcoin, cryptocurrencies, and smart contracts. Then you'll dive into 10 story-driven case studies that will teach you easy-to-understand blockchain best practices. Explore real-life examples of companies developing and integrating blockchain applications for mobile voting, credentialing, supply chains, and a \$100 million virtual cat collectible marketplace Discover how blockchain is transforming industries like banking, communications, government, logistics, and nonprofits Learn about engaging blockchain success stories, such as Binance, Ethereum, and Circle Examine common blockchain best practices, with illustrations for easy reference, and learn how to apply them in your business, government project, or charitable foundation  
[The Bullish Case for Bitcoin](#) Greenhaven Publishing LLC  
The purpose of the book is to provide a broad-based accessible introduction to three of the presently most important areas of computational finance, namely, option pricing,

algorithmic trading and blockchain. This will provide a basic understanding required for a career in the finance industry and for doing more specialised courses in finance.

### **Techno-Social and Legal Challenges**

Hachette UK

Tremendous growth in healthcare treatment techniques and methods has led to the emergence of numerous storage and communication problems and need for security among vendors and patients. This book brings together latest applications and state-of-the-art developments in healthcare sector using Blockchain technology. It explains how blockchain can enhance security, privacy, interoperability, and data accessibility including AI with blockchains, blockchains for medical imaging to supply chain management, and centralized management/clearing houses alongside DLT. Features: Includes theoretical concepts, empirical studies and detailed overview of various aspects related to development of healthcare applications from a reliable, trusted, and secure data

transmission perspective. Provide insights on business applications of Blockchain, particularly in the healthcare sector. Explores how Blockchain can solve the transparency issues in the clinical research. Discusses AI with Blockchains, ranging from medical imaging to supply chain management. Reviews benchmark testing of AI with Blockchains and its impacts upon medical uses. This book aims at researchers and graduate students in healthcare information systems, computer and electrical engineering.

### **SECURITY AND TRUST ISSUES IN INTERNET OF THINGS**

Harvard University Press

This book provides stepwise discussion, exhaustive literature review, detailed analysis and discussion, rigorous experimentation results (using several analytics tools), and an application-oriented approach that can be demonstrated with respect to data analytics using artificial intelligence to make systems stronger (i.e., impossible to breach). We can see many serious cyber breaches on Government

databases or public profiles at online social networking in the recent decade. Today artificial intelligence or machine learning is redefining every aspect of cyber security. From improving organizations' ability to anticipate and thwart breaches, protecting the proliferating number of threat surfaces with Zero Trust Security frameworks to making passwords obsolete, AI and machine learning are essential to securing the perimeters of any business. The book is useful for researchers, academics, industry players, data engineers, data scientists, governmental organizations, and non-governmental organizations.

*Regulating the Crypto Economy* Columbia University Press

This book is for anyone who wants to gain an understanding of Blockchain technology and its potential. The book is research-oriented and covers different verticals of Blockchain technology. It discusses the characteristics and features of Blockchain, includes techniques, challenges, and future trends, along with case studies for deeper understanding. Blockchain

Technology: Exploring Opportunities, Challenges, and Applications covers the core concepts related to Blockchain technology starting from scratch. The algorithms, concepts, and application areas are discussed according to current market trends and industry needs. It presents different application areas of industry and academia and discusses the characteristics and features of this technology. It also explores the challenges and future trends and provides an understanding of new opportunities. This book is for anyone at the beginner to intermediate level that wants to learn about the core concepts related to Blockchain technology.

### **CHINA'S FINTECH EXPLOSION**

Springer Nature  
The innovative investor's guide to an entirely new asset class—from two experts on the cutting edge With the rise of bitcoin and blockchain technology, investors can capitalize on the greatest investment opportunity since the Internet. Bitcoin was the first cryptoasset, but today there are over 800 and counting,

including ether, ripple, litecoin, monero, and more. This clear, concise, and accessible guide from two industry insiders shows you how to navigate this brave new blockchain world—and how to invest in these emerging assets to secure your financial future. Cryptoassets gives you all the tools you need: \* An actionable framework for investigating and valuing cryptoassets \* Portfolio management techniques to maximize returns while managing risk \* Historical context and tips to navigate inevitable bubbles and manias \* Practical guides to exchanges, wallets, capital market vehicles, and ICOs \* Predictions on how blockchain technology may disrupt current portfolios In addition to offering smart investment strategies, this authoritative resource will help you understand how these assets were created, how they work, and how they are evolving amid the blockchain revolution. The authors define a clear and original cryptoasset taxonomy, composed of cryptocurrencies, cryptocommodities, and cryptotokens, with insights into how each subset is blending

technology and markets. You'll find a variety of methods to invest in these assets, whether through global exchanges trading 24/7 or initial cryptoasset offerings (ICOs). By sequentially building on the concepts of each prior chapter, the book will provide you with a full understanding of the cryptoasset economy and the opportunities that await the innovative investor. Cryptoassets represent the future of money and markets. This book is your guide to that future.

### Blockchain Intelligence

Springer Nature

This book constitutes the refereed proceedings of the 23rd International Conference on Distributed and Computer and Communication Networks, DCCN 2020, held in Moscow, Russia, in September 2020. Due to the COVID-19 pandemic the conference was held online. The 43 papers were carefully reviewed and selected from 167 submissions. The papers are organized in the following topical sections: computer and communication networks and technologies; analytical modeling of distributed systems, and distributed systems applications.

*Blockchain Success Stories* Simon and Schuster

Financial technology—or fintech—is gaining in popularity globally as a way of making financial services more efficient and accessible. In rapidly developing China, fintech is taking off, catering to markets that state-owned banks and an undersized financial sector do not serve amid a backdrop of growing consumption and a large, tech-savvy millennial generation. It is becoming increasingly likely that some of China’s fintech firms will change the way the world does business. In *China’s Fintech Explosion*, Sara Hsu and Jianjun Li explore the transformative potential of China’s financial-technology industry, describing the risks and rewards for participants as well as the impact on consumers. They cover fintech’s many subsectors, such as digital payment systems, peer-to-peer lending and crowdfunding, credit card issuance, internet banks, blockchain finance and virtual currencies, and online insurance. The book highlights the disruption of traditional banking as well as the risks of fintech and regulatory technology.

Hsu and Li describe major companies including Alipay and Tencent, developer of WeChat Pay and a wealth-management business, and other leading fintech firms such as Creditease, Zhong An Insurance, and JD Finance. Offering expert analysis of market potential, risks, and competition, as well as case studies of firms and consumer behavior, *China’s Fintech Explosion* is a must-read for anyone interested in one of the world’s breakout sectors. **Enabling Blockchain Technology for Secure Networking and Communications** Nft Cryptocurrency Investment Guides 175 countries, four billion dollars, one scam: the thrilling rise and fall of the biggest cryptocurrency con in history and the woman behind it all In 2016, on stage at Wembley Arena in front of thousands of adoring fans, Dr. Ruja Ignatova promised her followers a financial revolution. The future, she said, belonged to cryptocurrencies such as Bitcoin. And the Oxford-educated, self-styled cryptoqueen vowed that she had invented the Bitcoin Killer. OneCoin would not only earn its investors untold fortunes;

it would change the world. By March 2017, more than \$4 billion had been invested in OneCoin in countries all around the world. But by October 2017, Ruja Ignatova had disappeared, and it slowly became clear that her revolutionary cryptocurrency was not all it seemed. Fortune was left asking, “Is OneCoin the biggest financial fraud in history?” In *The Missing Cryptoqueen*, acclaimed tech journalist Jamie Bartlett tells the story he began in his smash hit BBC podcast, entering the murky worlds of little-regulated cryptocurrencies and multilevel marketing schemes. Through a globe-crossing investigation into the criminal underworlds, corrupt governments, and the super-rich, he reveals a very modern tale of intrigue, techno-hype and herd madness that allowed OneCoin to become a million-person pyramid scheme – where, at the top, investors were making millions and, at the bottom, people were putting their livelihoods at risk. It’s the inside story of the smartest and biggest scam of the 21st Century – and the genius behind it, who is still on the run. **Origin of a Specie™**

Springer Nature  
In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to

promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/global-findex](http://www.worldbank.org/global-findex).

*The Book of Satoshi* CRC Press

This book is the first that describes the practices of any stock exchange; it makes evident a high development of practices, with puts, calls, pools, and manipulations; and it appeared as early as the seventeenth century. Not inappropriately the stock exchange described is that of Amsterdam, a city which at the date of the volume's publication—1688—was still the leading financial center of the world. The book, to be sure, is hardly a systematic account of the institution; the author pursued moral, philosophical, and rhetorical objectives, and, while saying a lot that seems now to be of little value, manages somehow to leave unsaid a great deal that would be of interest for us. Nevertheless, it represents, even in its peculiar form, a really important source of information about the stock exchange, and indeed about the Dutch business world of that period.

## INVESTMENTS

CRC Press

The purpose of this edited book is to present and showcase the basic fundamentals, applications, and integration of both IoT and Blockchain. The trend of applying Blockchain to IoT is rapidly growing because it helps to overcome various challenges faced by IoT, from smart manufacturing to unmanned aerial vehicles. This book aims to showcase the basics of both IoT and Blockchain as well as the integration and challenges for existing practitioners. This book initiates conversations among technologists, engineers, scientists, and clinicians to synergize their efforts in producing low-cost, high-performance, highly efficient, deployable IoT systems. This book is theory-based and is useful for engineers from various disciplines, including industrial engineering, computer science, electronics, telecommunications, electrical, agricultural, and cybersecurity, along with researchers, professionals, and students.

[Blockchain and the Digital Economy](#) O'Reilly Media

Since the launch of Bitcoin in 2009 several hundred different 'cryptocurrencies' have been developed and become accepted for a wide variety of transactions in leading online commercial marketplaces and the 'sharing economy', as well as by more traditional retailers, manufacturers, and even by charities and political parties. Bitcoin and its competitors have also garnered attention for their wildly fluctuating values as well as implication in international money laundering, Ponzi schemes and online trade in illicit goods and services across borders. These and other controversies surrounding cryptocurrencies have induced varying governance responses by central banks, government ministries, international organizations, and industry regulators worldwide. Besides formal attempts to ban Bitcoin, there have been multifaceted efforts to incorporate elements of blockchains, the peer-to-peer technology underlying cryptocurrencies, in the wider exchange, recording, and

broadcasting of digital transactions. Blockchains are being mobilized to support and extend an array of governance activities. The novelty and breadth of growing blockchain-based activities have fuelled both utopian promises and dystopian fears regarding applications of the emergent technology to Bitcoin and beyond. This volume brings scholars of anthropology, economics, Science and Technology Studies, and sociology together with GPE scholars in assessing the actual implications posed by Bitcoin and blockchains for contemporary global governance. Its interdisciplinary contributions provide academics, policymakers, industry practitioners and the general public with more nuanced understandings of technological change in the changing character of governance within and across the borders of nation-states.

*NFT Investing for Beginners to Advanced, Make Money; Buy, Sell, Trade, Invest in Crypto Art, Create Digital Assets, Earn Passive Income in Cryptocurrency, Stocks, Collectables and Royalty Shares* Springer Nature

Less than a decade after the Financial Crisis, we are witnessing the fast emergence of a new financial order driven by three different, yet interconnected, dynamics: first, the rapid application of technology - such as big data, machine learning, and distributed computing - to banking, lending, and investing, in particular with the emergence of virtual currencies and digital finance; second, a disintermediation fuelled by the rise of peer-to-peer lending platforms and crowd investment which challenge the traditional banking model and may, over time, lead to a transformation of the way both retail and corporate customers bank; and, third, a tendency of de-bureaucratisation under which new platforms and technologies challenge established organisational patterns that regulate finance and manage the money supply. These changes are to a significant degree driven by the development of blockchain technology. The aim of this book is to understand the technological and business potential of the blockchain technology and to reflect on its legal challenges. The book

mainly focuses on the challenges blockchain technology has so far faced in its first application in the areas of virtual money and finance, as well as those that it will inevitably face (and is partially already facing, as the SEC Investigative Report of June 2017 and an ongoing SEC securities fraud investigation show) as its domain of application expands in other fields of economic activity such as smart contracts and initial coin offerings. The book provides an unparalleled critical analysis of the disruptive potential of this technology for the economy and the legal system and contributes to current thinking on the role of law in harvesting and shaping innovation.

### **THE GLOBAL FINDEX DATABASE 2017**

Springer Nature  
We are only in the early stages of a broader revolution that will impact every aspect of the global economy, including commerce and government services. Coming financial technology innovations could improve the quality of life for all people. Over the past few decades, digital technology has transformed finance.

Financial technology (fintech) has enabled more people with fewer resources, in more places around the world, to take advantage of banking, insurance, credit, investment, and other financial services. Marion Laboure and Nicolas Deffrennes argue that these changes are only the tip of the iceberg. A much broader revolution is under way that, if steered correctly, will lead to huge and beneficial social change. The authors describe the genesis of recent financial innovations and how they have helped consumers in rich and poor countries alike by reducing costs, increasing accessibility, and improving convenience and efficiency. They connect the dots between early innovations in financial services and the wider revolution unfolding today. Changes may disrupt traditional financial services, especially banking, but they may also help us address major social challenges: opening new career paths for millennials, transforming government services, and expanding the gig economy in developed markets. Fintech could lead to economic

infrastructure developments in rural areas and could facilitate emerging social security and healthcare systems in developing countries. The authors make this case with a rich combination of economic theory and case studies, including microanalyses of the effects of fintech innovations on individuals, as well as macroeconomic perspectives on fintech's impact on societies. While celebrating fintech's achievements to date, Laboure and Deffrennes also make recommendations for overcoming the obstacles that remain. The stakes—improved quality of life for all people—could not be higher.

**Business Transformations and Financialisation**

Springer Nature  
This book addresses one of the most overlooked practical, methodological, and moral questions in the journey to secure and handle the massive amount of data being generated from smart

devices interactions: the integration of Blockchain with 5G-enabled IoT. After an overview, this book discusses open issues and challenges, which may hinder the growth of Blockchain technology. Then, this book presents a variety of perspectives on the most pressing questions in the field, such as: how IoT can connect billions of objects together; how the access control mechanisms in 5G-enabled industrial environment works; how to address the real-time and quality-of-service requirements for industrial applications; and how to ensure scalability and computing efficiency. Also, it includes a detailed discussions on the complexity of adoption of Blockchain for 5G-Enabled IoT and presents comparative case studies with respect to various performance evaluation metrics such as scalability, data management, standardization, interoperability and regulations, accessibility, human-factors engineering and

interfaces, reliability, heterogeneity, and QoS requirements. This book acts as a professional guide for the practitioners in information security and related topics.

**The Virtual Currency Regulation Review**

Bloomsbury Publishing  
This book introduces readers to recent advancements in financial technologies. The contents cover some of the state-of-the-art fields in financial technology, practice, and research associated with artificial intelligence, big data, and blockchain—all of which are transforming the nature of how products and services are designed and delivered, making less adaptable institutions fast become obsolete. The book provides the fundamental framework, research insights, and empirical evidence in the efficacy of these new technologies, employing practical and academic approaches to help professionals and academics reach innovative solutions and grow competitive strengths.
