**Conducting Research Literature
Reviews** Springer Nature

This new ASIST monograph is the first to comprehensively address the history, theory, and practical applications of citation analysis, a field which has grown from Garfield's seed of an idea, and to examine its impact on scholarly research forty years after its inception. In bringing together the analyses, insights, and reflections of more than thirty-five leading lights, editors Cronin and Atkins have produced both a comprehensive survey of citation indexing and its applications and a beautifully-realized tribute to Eugene Garfield and his vision, in honor of his seventy-fifth birthday.

Rowman & Littlefield

Traducción parcial de la Introducción:
"En la actualidad, la evaluación de la investigaciones es una cuestión que se está replanteando en todo el mundo. En algunos casos, los trabajos de investigación están generando resultados muy buenos, en la mayoría de los casos los resultados son mediocres, y en algunos casos negativos. Por todo esto, la evaluación de los resultados de la investigación se convierte en una condición sine qua non. Cuando el número de investigadores eran menos, eran los propios colegas de profesión quienes evaluaban la investigación. Con el paso del tiempo, el número de investigadores aumentó, las áreas de investigación proliferaron, los resultados de la investigación se multiplicaron. La tendencia continuó y

después de la Segunda Guerra Mundial, la investigación comenzó a crecer exponencialmente. Hoy en día, incluso en una estimación moderada hay alrededor de más de un millón de investigadores y producen más de dos millones de trabajos de investigación y otros documentos por año. En este contexto, la evaluación de la investigación es una cuestión de primera importancia. Para cualquier promoción, acreditación, premio y beca puede haber decenas o cientos de nominados. De entre éstos, seleccionar el mejor candidato es una cuestión difícil de determinar. Las evaluaciones inter pares en muchos casos están demostrando ser subjetivas. En 1963 se crea Science Citation Index (SCI) que cubre la literatura científica desde 1961. Unos

años después, Eugene Garfield, fundador del SCI, preparó una lista de los 50 autores científicos más citados basándose en las citas que recibía el trabajo de un autor por parte de los trabajos de otros colegas de investigación. El documento titulado "¿Pueden predecirse los ganadores del Premio Nobel? 'Fue publicado en 1968 (Garfield y Malin, 1968). En el siguiente año es decir, 1969, dos científicos que figuran en la lista, por ejemplo, Derek HR Barton y Murray Gell-Mann recibieron el codiciado premio. Esto reivindicó la utilidad del análisis de citas. Cada año, varios científicos pertenecientes al campo de la Física, Química, Fisiología y Medicina reciben el Premio Nobel. De esta manera el análisis de citas se convirtió en una herramienta útil. Sin

embargo, el análisis de citas siempre tuvo críticas y múltiples fallas. Incluso Garfield comentó - "El Uso del análisis de citas de los trabajos de evaluación es una tarea difícil. Existen muchas posibilidades de error '(Garfield, 1983). Para la evaluación de la investigación, se necesitaban algunos otros indicadores. El análisis de citas, junto con la revisión por pares garantiza el mejor juicio en innumerables casos. Pero se necesita algo que sea más exacto. La llegada de la World Wide Web (WWW) brindó la oportunidad; pues un buen número de indicadores se están generando a partir de los datos disponibles en la WWW". (Trad. Julio Alonso Arévalo. Univ. Salamanca).

Short Views on Insect Genomics and Proteomics Springer

This book is intended for anyone wants to research social, health, educational, and business issues. It is ideal for students, researchers, marketers, planners, and policymakers who design and manage public and private agencies, conduct research studies, and prepare strategic plans and grant proposals. This new edition includes: - Flow diagrams to assist the reader in linking each step of the review to the contents of each chapter. - New references and other online resources to help users learn more about literature reviews. - Links to online literature reviews and meta-analyses. - Guidance in choosing online public and private bibliographic databases for literature reviews. - Guidance about searching the web for research information. The text also

discusses the use of Boolean operators for simple and advanced searches, tells readers how to use bibliographic software to organize literature reviews and search 'The Virtual File Cabinet,' and describes how to synthesize the literature as a stand-alone report or as a component of a paper or proposal to justify the need for and significance of research, and/or to explain a study's findings.

Advancing Culture of Living with Landslides SAGE

African Studies in the Digital Age. DisConnects? is an essential new analysis of the effects of the digital revolution on the study of Africa, tackling questions of digitisation, access and resources, new opportunities and digital divides.

ECKM 2018 19th European Conference on Knowledge Management ISI Web of KnowledgeWeb of Science® consists of seven databases containing information gathered from thousands of scholarly journals, books, book series, reports, and more. Citation databases contain the references cited by the authors of the articles. You can use these references to do cited reference searching with coverage from over 10,000 high-impact journals in the sciences, social sciences, and arts and humanities, as well as international proceedings coverage for over 120,000 conferences. Thomson Reuters

This edited collection charts the development of, and prospects for, conceiving knowledge as a social phenomenon. The origin, aims and

growth of the journal Social Epistemology, founded in 1987, serves to anchor each of the book's contributions. Each contribution offers a unique, but related, insight on current issues affecting the organization and production of knowledge. In addition, each contribution proposes necessary questions, practices and frameworks relevant to the rapidly changing landscape of our conceptions of knowledge. The book examines the commercialization of science, the neoliberal university, the status and conduct of philosophy, the cultures of computer software and social networking, the practical, political and anthropological applications of social epistemology, and how we come to define what human beings are and what

activities human beings can, and should, sustain. A diverse group of noted, international scholars lends necessary, original and challenging perspectives on our collective approach to knowledge. This book was originally published as a special issue of Social Epistemology.

THE SSCI SYNDROME IN HIGHER EDUCATION

John Wiley & Sons

This textbook aims to provide awareness about research ethics, misconduct and the ensuing actions as per international law, information on open access publishing and predatory publishing. Many fresh research scholars are not fully acquainted with the rules governing copyright infringements, plagiarism and intellectual property rights. As such the

book presents its various features in a lucid style, and the latest updates on the use of information technology in retrieving and managing information through various means in an ethical manner. The book is useful for students, young researchers and professionals.

The History and Philosophy of Astrobiology Springer

This book is open access under a CC BY 4.0 license. This volume contains peer-reviewed papers from the Fourth World Landslide Forum organized by the International Consortium on Landslides (ICL), the Global Promotion Committee of the International Programme on Landslides (IPL), University of Ljubljana (UL) and Geological Survey of Slovenia in Ljubljana, Slovenia from May 29 to June 2, 2017. The complete collection of

papers from the Forum is published in five full-color volumes. This first volume contains the following:

- Three forum lectures
- Background and Content of the Sendai Partnerships 2015–2025
- Contribution from the signatory organizations of the Sendai Partnerships
- Landslide Dynamics: ISDR-ICL Landslide Interactive Teaching Tools (LIT T)
- Progress of the World Report on Landslides (WRL)
- International Programme on Landslides (IPL): Objects, History and List of WCoE/IPL projects
- UNESCO-KU-ICL UNITWIN Network supporting IPL
- Landslides: Journal of International Consortium on Landslides
- International Programme on Landslides (IPL): WCoEs and IPL Projects
- Landslides and Society Prof. Kyoji Sassa is the Founding President of the

International Consortium on Landslides (ICL). He is Executive Director of ICL and the Editor-in-Chief of International Journal Landslides since its foundation in 2004. Prof. Matjaž Mikoš is the Forum Chair of the Fourth World Landslide Forum. He is the Vice President of International Consortium on Landslides and President of the Slovenian National Platform for Disaster Risk Reduction. Prof. Yueping Yin is the President of the International Consortium on Landslides and the Chairman of the Committee of Geo-Hazards Prevention of China, and the Chief Geologist of Geo-Hazard Emergency Technology, Ministry of Land and Resources, P.R. China. IPL (International Programme on Landslides) is a programme of the ICL. The programme is managed by the IPL

Global Promotion Committee including ICL and ICL supporting organizations, UNESCO, WMO, FAO, UNISDR, UNU, ICSU, WFEO, IUGS and IUGG. The IPL contributes to the United Nations International Strategy for Disaster Reduction and the ISDR-ICL Sendai Partnerships 2015–2025.

In The Shadows of Glories Past Plural Publishing

Garfield's greatest contribution to science was the Science Citation Index (SCI). It is a system that used to chart connections between pieces of scientific literature. It is not only an intellectual achievement, but also an information-engineering marvel covering millions of records, from numerous subject fields and communicated over worldwide networks. These databases became the

foundation of the online research tool called the Web of Knowledge. And it has now become accessible electronically via the Web of Science. Garfield enabled information retrieval to scale up basically creating the entire information science field, as we know it today. His life and work will surely inspire generations of scientists in advancing the frontiers of human knowledge. This is *Informatics Studies* 4(2), which is Eugene Garfield Memorial Issue. It gives a bird's eye view of Garfield's life and work and consist of an 80 page interview of Garfield published in print for the first time presenting his views on impact of information systems in scientific research, NGOs, the future of Open Access, current research, and Big science which can guide academic

administrators, science policy makers in governments and scientists. [Journal of the National Cancer Institute](#) UNESCO Publishing
Global rankings and the Geopolitics of Higher Education is an examination of the impact and influence that university rankings have had on higher education, policy and public opinion in recent years. Bringing together some of the most informed authorities on this very complex issue, this edited collection of specially commissioned chapters examines the changes affecting higher education and the implications for society and the economy. Split into four interrelated sections, this book covers: The development of rankings in higher education, how they have impacted upon both the production of knowledge

and its geography, and their influence in shaping policymaking. Overviews of the significance of rankings for higher education systems in Europe, Asia, Africa, Russia, South America, India and North America. An analysis of rankings in relation to key concerns that pervade contemporary higher education. Examination of the role rankings are likely to play in the future directions for higher education. This is a significant scholarly work that analyses in depth an important development in higher education systems, and which is likely to have an important influence upon how we understand the higher education policy-making process – past, present and future. It provides new analysis and conceptual understanding for researchers, and firm evidence for policy

makers to use when addressing the value of rankings in measuring the quality of their institutions. Besides bringing together a powerful cast of academics, this book incorporates contributions from heads of important international higher education organisations – from both those involved in making and also in administering key decisions. This timely, reflective and accessible book forms crucial reading for those studying the subject of rankings, as well as the broader implications and unintended consequences of rankings on national higher education policies. Extending beyond academic researchers and students, this book will also be of significant interest to policymakers, higher education leaders and key stakeholders.

On Twenty-Five Years of Social Epistemology Bloomsbury Publishing USA

Human beings have wondered about the stars since the dawn of the species. Does life exist out there – intelligent life, even – or are we alone? The quest for life in the universe touches on fundamental hopes and fears. It touches on the essence of what it means to formulate a theory, grasp a concept, and have an imagination. This book traces the history of the science of this area and the development of new schools in philosophy. Its essays seek to establish the history and philosophy of astrobiology as research fields in their own right by addressing cognitive, linguistic, epistemological, ethical, cultural, societal, and historical

perspectives on astrobiology. The book is divided into three sections. The first (Cognition) focuses on the human mind and what it contributes to the search for life. It explores the emergence and evolution of terrestrial life and cognition and the challenges humans face as they reach to the stars. The essays raise philosophical questions, pose ethical dilemmas, and offer a variety of approaches, including one from cognitive zoology, in formulating a theory of the universal principles of intelligence, the limits of human conceptual abilities, and the human mind's encounter with the unknown. The second section (Communication) examines the linguistic and semiotic requirements for interstellar communication. What is needed for

successful communication? Are there universal rules for success? What are the possible features – and limitations – of exolanguages? What is required for recognizing a message as a message? The third section (Culture) considers cultural and societal issues. It explores astrobiology's organization as a scientific discipline, its responsibilities to the public sphere, and its theological implications. It reviews the historically important panspermia hypothesis, along with the popularization of astrobiology and its ongoing institutionalisation. Through addressing these questions, we take our first steps in exploring the immense terra incognita of extraterrestrial life and the human mind. *Research evaluation metrics* SEG Books ISI Web of Knowledge

Succeeding With Your Literature Review: A Handbook For Students

Cambridge Scholars Publishing

This book analyses and discusses the recent developments for assessing research quality in the humanities and related fields in the social sciences. Research assessments in the humanities are highly controversial and the evaluation of humanities research is delicate. While citation-based research performance indicators are widely used in the natural and life sciences, quantitative measures for research performance meet strong opposition in the humanities. This volume combines the presentation of state-of-the-art projects on research assessments in the humanities by humanities scholars themselves with a description of the

evaluation of humanities research in practice presented by research funders. Bibliometric issues concerning humanities research complete the exhaustive analysis of humanities research assessment. The selection of authors is well-balanced between humanities scholars, research funders, and researchers on higher education. Hence, the edited volume succeeds in painting a comprehensive picture of research evaluation in the humanities. This book is valuable to university and science policy makers, university administrators, research evaluators, bibliometricians as well as humanities scholars who seek expert knowledge in research evaluation in the humanities.

Conductive Atomic Force Microscopy
Information Today, Inc.

The overall aim of the book is to introduce students to the typical course followed by a data analysis project in earth sciences. A project usually involves searching relevant literature, reviewing and ranking published books and journal articles, extracting relevant information from the literature in the form of text, data, or graphs, searching and processing the relevant original data using MATLAB, and compiling and presenting the results as posters, abstracts, and oral presentations using graphics design software. The text of this book includes numerous examples on the use of internet resources, on the visualization of data with MATLAB, and on preparing scientific presentations. As with its sister book MATLAB Recipes for Earth Sciences–3rd Edition (2010), which

demonstrates the use of statistical and numerical methods on earth science data, this book uses state-of-the art software packages, including MATLAB and the Adobe Creative Suite, to process and present geoscientific information collected during the course of an earth science project. The book's supplementary electronic material (available online through the publisher's website) includes color versions of all figures, recipes with all the MATLAB commands featured in the book, the example data, exported MATLAB graphics, and screenshots of the most important steps involved in processing the graphics.

Excerpt: Thomson Reuters Corporation is a multinational media and information firm based in New York City. It was created by the Thomson Corporation's purchase of Reuters Group on 17 April 2008. The Woodbridge Company, a holding company for the Thomson family of Canada, owns 53% of the group, which operates in more than 100 countries, and has more than 60,000 employees. Thomson Reuters was ranked as Canada's "leading corporate

brand" in the 2010 Interbrand Best Canadian Brands ranking. It is headquartered at 3 Times Square, Manhattan, New York City. The Company was founded by Roy Thomson in 1934 in Ontario as the publisher of The Timmins Daily Press. In 1953 Thomson acquired the Scotsman newspaper and moved to Scotland the following year. He consolidated his media position in Scotland in 1957 when he won the franchise for Scottish Television. In 1959 he bought the Kemsley Group, a purchase that...

KAIZEN-21 Springer Science & Business Media

The task of researching and writing a literature review is complex. This text provides comprehensive, practical guidance on the process of researching a

range of relevant literature on a subject, then planning and writing a literature review.

An Analysis of Benedict Anderson's Imagined Communities Springer

This familiar guide to information resources in the humanities and the arts, organized by subjects and emphasizing electronic resources, enables librarians, teachers, and students to quickly find the best resources for their diverse needs. Authoritative, trusted, and timely, *Information Resources in the Humanities and the Arts: Sixth Edition* introduces new librarians to the breadth of humanities collections, experienced librarians to the nature of humanities scholarship, and the scholars themselves to a wealth of information they might otherwise have missed. This new version

of a classic resource—the first update in over a decade—has been refreshed to account for the myriad of digital resources that have rewritten the rules of the reference and research world, and been expanded to include significantly increased coverage of world literature and languages. This book is invaluable for a wide variety of users: librarians in academic, public, school, and special library settings; researchers in religion, philosophy, literature, and the performing and visual arts; graduate students in library and information science; and teachers and students in humanities, the arts, and interdisciplinary degree programs.

Routledge

Entomology is a super science, embracing interdisciplinary approaches

in genomics, proteomics, and interdependent fields of biochemistry, physiology, molecular entomology, and biotechnology. An urgent need to manage available resources for the benefit of the planet and humankind has led to remarkable progress since publication of the fruit fly genome in 2000. "Short Views on Insect Genomics and Proteomics" presents multiple perspectives of recognized experts from around the world in genomics, bioinformatics, molecular biology, biochemistry, physiology, and immunology, emphasizing fast-moving areas of current research on insects and other arthropods. Concise, accessible, topical reviews include body lice and white fly genome projects, aphid phenotypic plasticity, insect regulatory

genomics, the complex tick sialome, protein expression systems, therapeutic potential of insect antimicrobial peptides, nanoparticle insecticides, and novel uses for recombinant and synthetic spider silks.

ISI WEB OF KNOWLEDGE

CRC Press

Scholarly Communications: A History from Content as King to Content as Kingmaker traces the development of scholarly communications from the creation of the first scientific journal through the wide diversity of professional information services today. Unlike any other book, this work examines the changing nature of scholarly communication throughout its history, including its research

importance as well as its business value. Regazzi examines research content as an economic good; how technology and business models have greatly affected the value of scholarly publishing; and the drivers of the future sustainability of our system of scholarly communication.

Internet Research Skills Springer Science & Business Media

This book provides an overview and analysis of the key publications and authors in the study of supply chain management since its inauguration in the 1980s. Reviewing 1699 published research works and case studies, it is the first to combine and analyse publication data and citations in order to assess the most popular topics and authors, and their effect on the discipline's development. Identifying key scholars

and articles throughout supply chain management, the author explores research themes such as the emphasis on sustainability and the environment post-financial crisis, as well as a growing interest in food supply chain case studies. New approaches are identified to increase the number of cases which can be put towards building future research projects.

Building a Research Career Springer Web of Science® consists of seven databases containing information gathered from thousands of scholarly journals, books, book series, reports, and more. Citation databases contain the references cited by the authors of the articles. You can use these references to do cited reference searching with coverage from over 10,000 high-impact

journals in the sciences, social sciences, and arts and humanities, as well as international proceedings coverage for over 120,000 conferences.
