"This practical and helpful volume details how clinicians can work through various and common challenges inherent to psychotherapy, whether within the context of individual, marital, or group settings. Chapters draw upon wisdom gleaned from the author's 48 years as a practicing psychiatrist to address topics such as using countertransference for therapeutic purposes; resistance, especially when it needs to be the focus of the therapy; and a prioritization of exploration over explanation and favor working in the here-and-now. Along with theory and clinical observations, Dr. Gans offers a series of "Clinical Pearls," pithy comments that highlight different interventions to a wide range of clinical challenges. These include patient hostility, the abrupt termination of therapy, treating a couple that's lost compassionate neutrality, and more. In addition to offering advice and strategies for therapists, the book also addresses foundational concerns like the matter of fees in private practice and the virtue of moral courage on the part of the therapist. Written with clarity, heart, and an abundance of clinical wisdom, *Challenging Moments in Psychotherapy* is essential reading for all clinicians, teachers, and supervisors of psychotherapy"--

From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent - and loud - fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it - personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

This is a story of belief, disillusionment and atonement. Long identified with leftist causes, the journalist Eugene Lyons was by background and sentiment predisposed to early support of the Russian Revolution. A "friendly correspondent," he was one of a coterie of foreign journalists permitted into the Soviet Union during the Stalinist era because their desire to serve the revolution was thought to outweigh their desire to serve the truth. Lyons first went to the Soviet Union in 1927, and spent six years there. He was there as Stalin consolidated his power, through collectivization and its consequences, as the cultural and technical intelligentsia succumbed to the secret police, and as the mechanisms of terror were honed. As Ellen Frankel Paul notes in her major new introduction to this edition, "It was this murderous reality that Stalin's censors worked so assiduously to camouflage, corralling foreign correspondents as their often willing allies." Lyons was one of those allies. Assignment in "Utopia" describes why he refused to see the obvious, the forces that kept him from writing the truth, and the tortuous path he traveled in liberating himself. His story helps us understand how so many who were in a position to know were so silent for so long. In addition, it is a document, by an on-the-scene journalist, of major events in the critical period of the first Five-Year Plan. As Ellen Frankel Paul notes in her major new introduction to this new edition, Assignment in "Utopia" is particularly timely. The system it dissects in such devastating detail is in the process of being rejected throughout Eastern Europe and is under challenge in the Soviet Union itself. The book lends insight into the "political pilgrim" phenomenon described by Paul Hollander, in which visitors celebrate terrorist regimes, seemingly oblivious to their destructive force. The book is valuable for those interested in the Stalinist era in the Soviet Union, those interested in radical regimes and political change, as well as those interested in better understanding current events in Europe. It will also be useful for the tough questions it poses about journalistic ethics.

In a tale full of humor and poignancy, a sheltered twelve-year-old boy comes of age in a small Florida mining town amid the changing mores of the 1960s. It's 1966 and Dewey Turner is determined to start the school year right. No more being the brunt of every joke. No more "Deweyitis." But after he stains his face with shoe polish trying to mimic the popular Shoeshine Boy at the minstrel show, he begins seventh grade on an even lower rung, earning the nickname Sambo and being barred from the "whites only" bathroom. The only person willing to talk to him, besides his older brother, Wayne, is fellow outsider Darla Turkel, who wears her hair like Shirley Temple and sings and dances like her, too. Through their friendship, Dewey gains awareness of issues bigger than himself and bigger than his small town of Sand Mountain: issues like race and segregation, the reality of the Vietnam War, abuse, sexuality, and even death and grieving. Written in a riveting, authentic voice, at times light-hearted and humorous and at others devastating and lonely, this deeply affecting story will stay with readers long after the book is closed. *Addressing Challenging Moments in Psychotherapy* Haynes Manuals N. Coeur d'Alene's love/hate relationship with boat racing is at the center of this comprehensive history of the Diamond Cup race for unlimited hydroplanes. The early origins of competitive boat racing on Coeur d'Alene Lake, the backstory of the how the small lakeside community came to host ten years of the Diamond Cup, the true story of the civil disturbances that would cast a lasting pawl on the event, the real reasons behind the decision to stop hosting the races, and the drama and controversy that led to the races being banned from the city are all covered in depth. The stories of the civic leaders, race volunteers, boat owners, drivers, and other key individuals that came together to put on the exciting spectacle that was the Diamond Cup are lovingly recounted. Of interest to boat racing fans and those curious about one of the premier sporting events in the history of North Idaho. Illustrated with over 100 photographs.

A comprehensive, authoritative, and accessible reference for disaster robotics that covers theory, specific deployments, and ground, air, and marine modalities. This book offers the definitive guide to the theory and practice of disaster robotics. It can serve as an introduction for researchers and technologists, a reference for emergency managers, and a textbook in field robotics. Written by a pioneering researcher in the field who has herself participated in fifteen deployments of robots in disaster response and recovery, the book covers theory and practice, the history of the field, and specific missions. After a broad overview of rescue robotics in the context of emergency informatics, the book provides a chronological summary and formal analysis of the thirty-four documented deployments of robots to disasters that include the 2001 collapse of the World Trade Center, Hurricane Katrina, the 2010 Haiti earthquake, the Deepwater Horizon oil spill, the 2011 Japanese earthquake and tsunami, and numerous mining accidents. It then examines disaster robotics in the typical robot modalities of ground, air, and marine, addressing such topics as robot types, missions and tasks, and selection heuristics for each modality. Finally, the book discusses types of fieldwork, providing practical advice on matters that include collecting data and collaborating with emergency professionals. The field of disaster robotics has lacked a comprehensive overview. This book by a leader in the field, offering a unique combination of the theoretical and the practical, fills the gap.

Bringing together a range of leading social scientists and criminologists, this volume explores a number of key themes raised by the work of Robert Reiner. Arguably the leading policing scholar of his generation, Reiner's work over some 40 years has ranged broadly in this field, taking in the study of police history, culture, organisation, elites and relationships with the media. Always carefully situated within an analysis of the changing socio-political circumstances of policing and crime control, Robert Reiner's scholarship has been path-breaking in its impact. The 13 original essays in this volume are testament to Reiner's influence. Although reflecting the primarily British bent within his work, the essays also draw on contributors from Australia, Europe, South Africa and the United States to explore some of the leading debates of the moment. These include, but are not limited to, the impact of neo-liberalism on crime control and the challenges for modern social democracy; police culture, equality and political economy; new media and the future of policing; youth, policing and democracy, and the challenges and possibilities posed by globalisation in the fields of policing and security.

This lecture attempts to tell stories through music and about music, and about the music of several cultures and times, about its effect on human experience, about the instruments and their makers in order to try and connect the present time with some of music's own roots, a cause for much reflection on the part of the lecturer.

Going Through the Gears

"Mining exploration investment in the Latin American and Caribbean region has increased 130 percent in the last five years, a figure which increases to 500 percent, if Chile is excluded." Governments have revamped mining legislation to enable private investment while becoming more sensitive to environmental factors. In light of this legislation, this report examines the environmental effects of artisanal, small, and medium mines in three Latin American Countries: Bolivia, Chile, and Peru. Four of the most important elements to be considered are: □ The age of the mine □ Management of tailings □ The heterogeneity of the artisanal and small mine sectors □ The increasing need to take cultural considerations into account in the decision making process. The paper contains results of the studies on the various mining sectors, strategy and policy recommendations, and country study summaries.
