"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be

made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

The Bulletin of the American Hospital Association University of Chicago Press This updated edition defines the productive period of time typical health care capital assets have before they become obsolete. The introduction includes an overview of the importance of the capital planning process and helpful tips on managing capital projects once they are under way. This edition contains information on hundreds of items and includes new capital assets that reflect recent technological developments. It provides asset life span estimates in reference tables for the major equipment and capital asset investments found in hospitals and physician group practices. This book can save any health care organization immeasurable time and reduce the risk of reimbursement questions arising from the assigned life of

a capital asset.

C. Rufus Rorem, (1894-1988) was a pioneer in the development of group medical insurance and pre-paid health care. At the time the concepts were radical, but in 1937 he became head of the American Hospital Association's committee on hospital services, which fostered the first prepaid hospitalization plans in New York and other cities, followed in the 1940's by doctors' group practice. This collection includes out of print and difficult to access primary and secondary sources on Rorem's work, including his 1929 dissertation which presents his major, and still relevant writings on financial accounting theory and practice in a comprehensive, integrated context.

Proposed Reimbursement Formula to Control Hospital Costs Springer
New drugs, new devices, improved surgical techniques, and innovative diagnostic procedures and equipment emerge rapidly. But development of these technologies has outpaced evaluation of their safety, efficacy, cost-effectiveness, and ethical and social consequences. This volume, which is "strongly recommended" by The New England Journal of Medicine "to all those interested in the future of the practice of medicine," examines how new discoveries can be translated into better care, and how the current system's inefficiencies prevent effective health care delivery. In addition, the book offers detailed profiles of 20 organizations currently involved in medical technology assessment, and proposes ways to organize U.S. efforts and create a coordinated national system for evaluating new medical treatments and technology.

The ICD-10-CM Coding Handbook is the only guide published in collaboration with

the Central Office of the American Hospital Association. The Central Office is the official industry body that prepares the AHA Coding Clinic. The Handbook helps coders understand the principles behind the classification system so they can apply the official coding advice found in the Coding Manual. Academic and in-service instructors can easily arrange course outlines and study exercises around Handbook chapters to train new and experienced coders.

A comprehensive "users manual" for analyzing a medical imaging capital budget project. The book utilizes a step by step approach based on a case scenario for introducing the concept of medical equipment capital budgeting assessment and evaluation. The case scenario is the acquisition of an MRI equipment by a for-profit hospital. The target audience is students and professionals involved into consulting, managing, planning and assessment of health care financial investments. Although traditionally health care finance books introduce the principles

of capital budgeting methods and then advance to investment evaluation approaches, this book attempts a different approach. It utilizes as a vehicle a case base scenario for becoming the reader's "user manual" in evaluating capital budgeting decisions. It is written in a format, that the reader could replicate for directly applying it to his/hers specific problem.

The New Health Care for Profit

National Academies Press

This book explains how telemedicine can offer solutions capable of improving the care and survival rates of cancer patients and can also help patients to live a normal life in spite of their condition. Different fields of application – community, hospital and home based – are examined, and detailed attention is paid to the use of tele-oncology in rural/extreme rural settings and in developing countries. The impact of new technologies and the opportunities afforded by the social web are both discussed. The concluding chapters consider eLearning in relation to cancer care and assess the scope for education to improve prevention. No medical condition can shatter people's

lives as cancer does today and the need to develop strategies to reduce the disease burden and improve quality of life is paramount. Readers will find this new volume in Springer's TELe Health series to be a rich source of information on the important contribution that can be made by telemedicine in achieving these goals.

"[This book is] the most authoritative assessment of the advantages and disadvantages of recent trends toward the commercialization of health care," says Robert Pear of The New York Times. This major study by the Institute of Medicine examines virtually all aspects of for-profit health care in the United States, including the quality and availability of health care, the cost of medical care, access to financial capital, implications for education and research, and the fiduciary role of the physician. In addition to the report, the book contains 15 papers by experts in the field of for-profit health care covering a

broad range of topics--from trends in the growth of major investor-owned hospital companies to the ethical issues in for-profit health care. "The report makes a lasting contribution to the health policy literature."--Journal of Health Politics, Policy and Law.

The objectives of this study are to describe experiences in price setting and how pricing has been used to attain better coverage, quality, financial protection, and health outcomes. It builds on newly commissioned case studies and lessons learned in calculating prices, negotiating with providers, and monitoring changes. Recognising that no single model is applicable to all settings, the study aimed to generate best practices and identify areas for future research, particularly in low- and middle-income settings. The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).

In recent years, the hospital industry has been undergoing massive change and reorganization with technological innovations and the spread of managed care. As a result, the total number of hospitals countrywide has been declining, and a growing number of not-for-profit hospitals have converted to for-profit status. These changes raise two fundamental questions: What determines a hospital's choice of for-profit or not-for-profit organizational form? And how does that form affect patients and society? This timely volume provides a factual basis for discussing for-profit versus not-for-profit ownership of hospitals and gives a first look at the evidence about new and important issues in the hospital industry. The Changing Hospital Industry: Comparing Not-for-Profit and For-Profit Institutions will have significant implications for public-policy reforms in this vital industry and will be of great interest to scholars in the fields of health economics, public finance, hospital organization, and management; and to health services researchers.

Social anxiety disorder is persistent fear of (or anxiety about) one or more social situations that is out of proportion to the actual threat posed by the situation and can be severely detrimental to quality of life. Only a minority of people with social anxiety disorder receive help. Effective treatments do exist and this book aims to increase identification and assessment to encourage more people to access interventions. Covers adults, children and

young people and compares the effects of pharmacological and psychological interventions. Commissioned by the National Institute for Health and Clinical Excellence (NICE). The CD-ROM contains all of the evidence on which the recommendations are based, presented as profile tables (that analyse quality of data) and forest plots (plus, info on using/interpreting forest plots).
